R. VIJAYALAKSHMI

User Story:

The Student Enrollment & Course Management System (SECMS) is a Salesforce-based application designed to simplify and automate the complete student enrollment and course management process of an educational institution.As a Student, I want to view available courses, select suitable courses, submit enrollment requests, and track my enrollment status so that I can complete my registration easily. As an Enrollment Officer, I want to create and manage student records, process enrollment requests, verify student information, and monitor enrollment status so that student registrations can be handled efficiently.As an Instructor, I want to view the courses and students assigned to me so that I can manage my academic responsibilities effectively.As an Administrator, I want to manage students, courses, instructors, enrollments, approvals, and reports so that the institution can monitor academic operations from a centralized system.The system uses Salesforce Objects, Lightning App, Validation Rules, Flows, Approval Processes, Reports, and Dashboards to automate enrollment activities, reduce manual errors, improve data accuracy, and provide real-time visibility into student and course information.

1.INTRODUCTION

1.1 Project Overview :

The Student Enrollment & Course Management System (SECMS) is a Salesforce-based application developed to simplify and automate the academic enrollment activities of an educational institution. The system provides a centralized platform for managing student information, course details, enrollment records, instructor assignments, approval processes, payments, reports, and dashboards.

In traditional academic institutions, student and enrollment information may be maintained using spreadsheets, separate systems, emails, and manual records. This can make it difficult to maintain accurate information and may lead to duplicate entries, delays, and approval bottlenecks. SECMS addresses these problems by bringing important academic operations into a single Salesforce environment.

The system allows administrators, enrollment officers, and instructors to perform their respective activities efficiently. Enrollment officers can manage student admissions and course registrations, while instructors can access information related to their assigned students and courses. Administrators can monitor enrollment activities, approvals, revenue, and overall system performance.

1.2 Purpose :

The Student Enrollment & Course Management System (SECMS) is a Salesforce-based application developed to simplify and automate the academic enrollment activities of an educational institution.

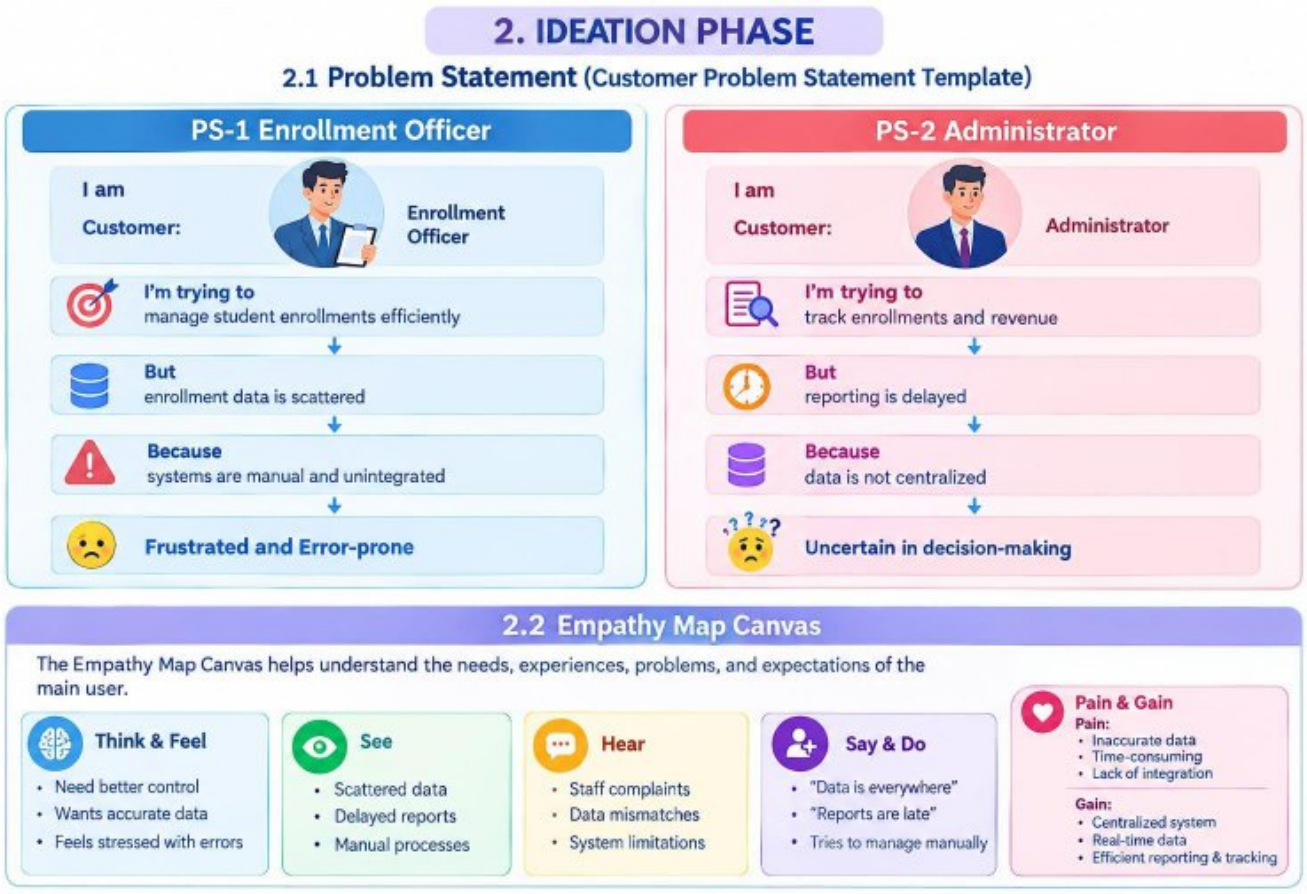

The system provides a centralized platform for managing student information, course details, enrollment records, instructor assignments, approval processes, payments, reports, and dashboards. In traditional academic institutions, student and enrollment information may be maintained using spreadsheets, separate systems, emails, and manual records. This can make it difficult to maintain accurate information and may lead to duplicate entries, delays, and approval bottlenecks. SECMS addresses these problems by bringing important academic operations into a single Salesforce environment.

The system allows administrators, enrollment officers, and instructors to perform their respective activities efficiently. Enrollment officers can manage student admissions and course registrations, while instructors can access information related to their assigned students and courses. Administrators can monitor enrollment activities, approvals, revenue, and overall system performance.

2.IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Enrollment Officer	manage student enrollments efficiently	enrollment data is scattered	systems are manual and unintegrated	frustrated and errorprone
PS-2	Administrator	track enrollments and revenue	reporting is delayed	data is not centralized	uncertain in decision-making

2.2 Empathy Map Canvas

The Empathy Map Canvas helps understand the needs, experiences, problems, and expectations of the main user.

User Persona: Enrollment Officer

- Think & Feel: Concerned about double bookings and revenue loss
- Hear: Complaints from students and management
- See: Multiple spreadsheets and emails
- Say & Do: Rechecks data, follows up manually
- Pain: Duplicate entries, approval bottlenecks
- Gain: Automation, dashboards, faster processing

2. IDEATION PHASE

2.2 Empathy Map Canvas

User Persona: Enrollment Officer

Think & Feel

- Concerned about double bookings
- Worried about revenue loss

Hear

- Complaints from students
- Feedback from management

See

- Multiple spreadsheets
- Overflowing emails

Say & Do

- Rechecks data
- Follows up manually

Pain

- Duplicate entries
- Approval bottlenecks

Gain

- Automation, dashboards
- Faster processing

2.3 Brainstorming & Idea Prioritization:

This stage is used to generate different possible solutions and then select a suitable solution for the identified problem.

Step 1 – Brainstormed Ideas

Four possible ideas were considered:

1. Spreadsheet Automation

Using automation with spreadsheets to reduce manual work.

2. Standalone Enrollment Portal

Creating a separate portal specifically for managing student enrollment.

3. ERP Integration

Integrating enrollment activities with an Enterprise Resource Planning system.

4. Salesforce-Based Enrollment System

Using Salesforce to create a centralized and automated enrollment management system.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

Step 2 – Grouping

The ideas were grouped into three categories:

1. Manual Solutions

Solutions that depend heavily on manual data entry and management.

2. Semi-Automated Solutions

Solutions that automate some activities but still require manual operations.

3. Fully Automated Cloud Solutions

Cloud-based solutions that provide centralized data management and automation.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

Step 3 – Prioritization

After comparing the proposed ideas, the project selected a Salesforce-based Student Enrollment & Course Management System (SECMS).

The document states that the Salesforce-based solution was selected based on high feasibility and high impact.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf Final Idea

Salesforce-Based Student Enrollment & Course Management System

It provides a centralized platform for managing:

Students → Courses → Enrollments → Instructors → Approvals → Payments → Reports → Dashboards

3.REQUIREMENT ANALYSIS PHASE

The Requirement Analysis Phase identifies the requirements and functionalities needed for the Student Enrollment & Course Management System (SECMS). It mainly includes the customer journey, functional requirements, non-functional requirements, and data flow.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

3.1 Customer Journey:

The customer journey describes the different stages involved in the student enrollment process.

Awareness & Registration

Students learn about the available courses and register in the system.

Course Selection

Students select the course they want to enroll in.

Enrollment Request

Students submit an enrollment request for the selected course.

Fee Payment

The required course fee payment process is completed.

Approval

The enrollment request is reviewed and approved or rejected by the authorized person.

Instructor Assignment

An instructor is assigned to the approved enrollment.

Reporting & Completion

Enrollment details are monitored through reports and dashboards.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

3.2 Solution Requirements

Functional Requirements

FR No	Epic	Description
FR-1	Student Management	Manage student records
FR-2	Course Management	Create and manage courses
FR-3	Enrollment Processing	Request, approve, reject enrollments
FR-4	Instructor Assignment	Auto-assign instructors
FR-5	Reporting	Dashboards and reports

Functional requirements describe the main functions that the system must perform.

FR-1: Student Management

The system should allow users to create, store, and manage student records efficiently.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

FR-2: Course Management

The system should allow authorized users to create and manage course information and available courses.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

FR-3: Enrollment Processing

The system should allow users to submit enrollment requests and provide options to approve or reject those requests.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

FR-4: Instructor Assignment

The system should automatically assign instructors to approved enrollments, reducing manual work.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

FR-5: Reporting

The system should provide reports and dashboards to monitor enrollment information and status.

3.3 Data Flow Diagram

3.3 Non-Functional Requirements

Non-functional requirements describe the quality and performance characteristics of the system.

NFR-1: Usability

The system should be easy to use and provide a user-friendly interface.

NFR-2: Security

The system should protect student and enrollment data using role-based access.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

NFR-3: Reliability

The system should work reliably and process data and workflows accurately.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

NFR-4: Performance

The system should process user requests efficiently and provide information without unnecessary delays.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

NFR-5: Scalability

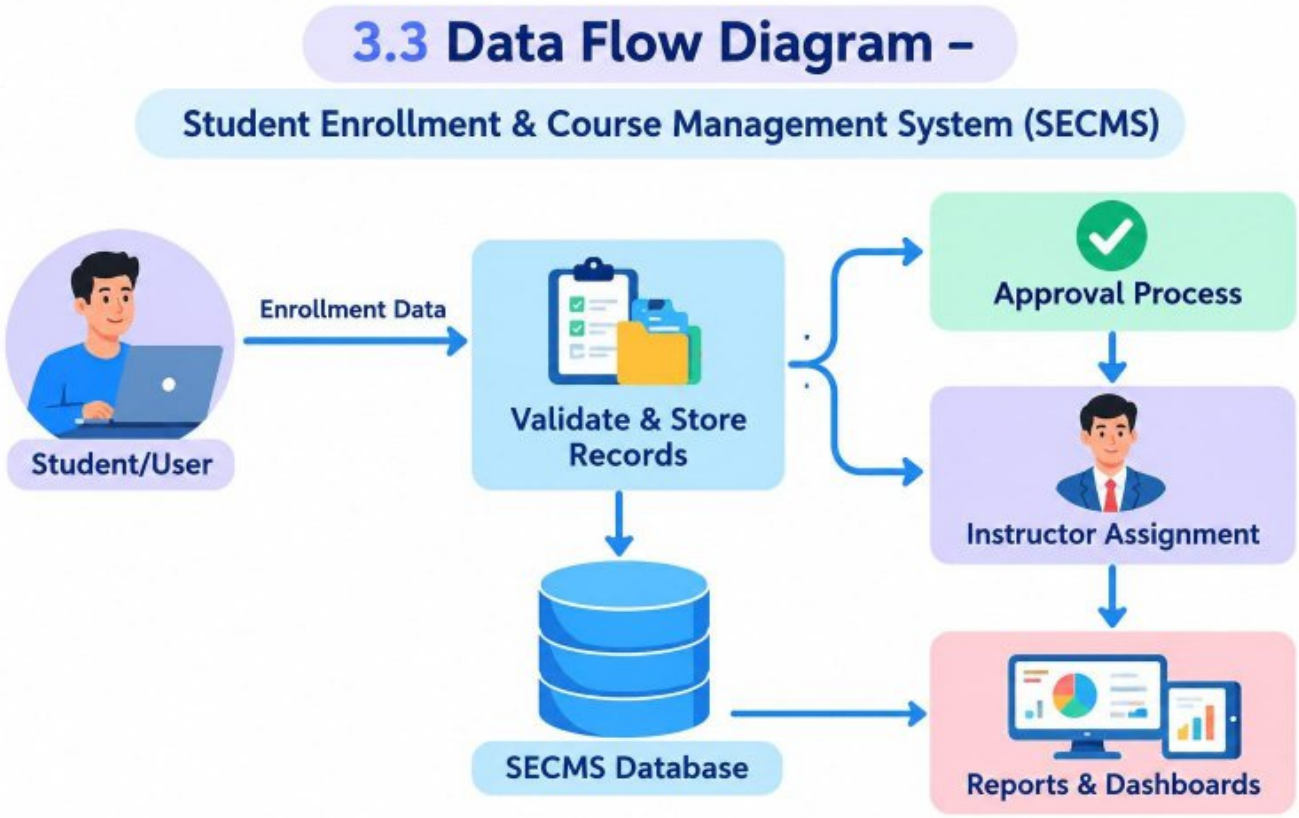

The system should be able to handle an increase in students, courses, and enrollment records in the future.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

NFR-6: Availability

The system should be available to authorized users whenever they need to access the system and its data.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

3.4 Technology Stack

Layer	Technology
UI	Salesforce Lightning
Logic	Salesforce Flows
Database	Salesforce Objects
Automation	Validation Rules, Approval Process
Reporting	Reports & Dashboards

The Data Flow Diagram (DFD) represents how data moves through the Student Enrollment System.

Student details, course information, and enrollment data are processed within the system. Salesforce Objects are used to store the data, while Salesforce Flows are used for logic and automation.

Simple meaning

Lightning = UI

Objects = Database

Flow = Automation

Validation Rule = Error checking

Approval Process = Approval workflow

Reports/Dashboard = Data analysis

4.PROJECT DESIGN PHASE

The Project Design Phase defines how the

Student Enrollment & Course Management

System (SECMS) will be structured and

implemented in Salesforce. It converts the identified requirements into a practical system design.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

4.1 Problem-Solution Fit:

The problem-solution fit explains how the proposed SECMS addresses the problems identified during the requirement analysis phase.

Student and course information is maintained in a centralized system.

Enrollment activities are organized through structured

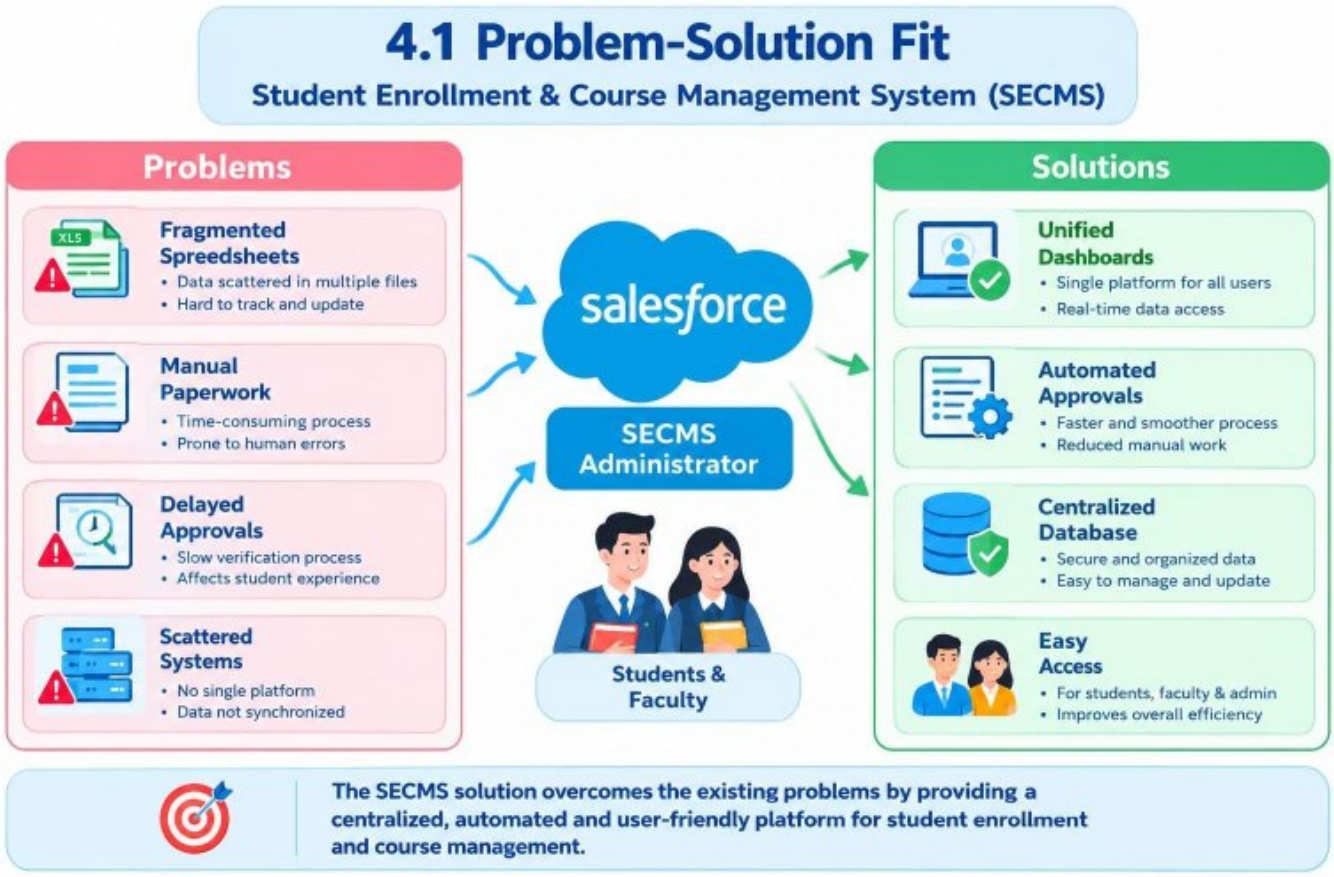

workflows.

Approval processes reduce manual work.

Instructor assignment can be automated.

Reports and dashboards provide better visibility of enrollment information.

Salesforce provides a scalable platform for implementing the solution.

4.2 Proposed Solution

Functional Requirements

Parameter	Description
Problem	Manual enrollment handling
Solution	Salesforce-based SECMS
Novelty	End-to-end automation
Social Impact	Improved student experience
Revenue Model	Institutional deployment
Scalability	Multi-department support

The proposed solution is a Salesforce-based Student Enrollment & Course Management System.

The system manages the major academic enrollment activities in one platform, including:

Student management

Course management

Enrollment processing

Instructor assignment

Approval workflows

Reporting and dashboards

Data management and security

This helps replace fragmented and manual processes with a centralized and automated system.

4.3 Solution Architecture

The system architecture connects:

Salesforce Objects

→ Automation Flows

→ Approval Process

→ Reports

→ Dashboards

→ Security

This creates one integrated academic-management system.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

The project uses Agile methodology.

Agile means:

Project is developed in small stages called Sprints.

PDF mentions:

Epics

User Stories

Story Points

Sprint execution

Velocity calculation

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Developer Setup	USN-1	As a system administrator, I want to create a Salesforce developer account so that I can configure and deploy the Student Enrollment system..	1	High	Member1

Sprint meaning

A Sprint is a fixed development period in which specific tasks are completed.

gile methodology

pics → Stories → Story Points

print-based execution

elocity calculation used for estimation

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

USN-1

Admin wants to create Salesforce developer account.

USN-2

Admin wants custom objects for:

Student

Course

Enrollment

Instructor

USN-3

User wants separate tabs for each object.

USN-4

Sprint-1	Data Modeling	USN-2	As an admin, I want to create custom objects for Student,	3	High	Member2

Admin wants appropriate fields for student/course/enrollment data.

USN-5

Enrollment officer wants centralized Lightning application.

USN-6

Admin wants relationships between objects.

USN-7

User wants customized page layouts.

USN-8

System validates required fields and enrollment limits.

USN-9

System automates enrollment processing and notifications.

USN-10

Admin wants enrollment approval process.

USN-11

Admin wants role-based security.

USN-12

Manager wants enrollment/course/instructor reports.

USN-13

Manager wants dashboards for enrollment statistics.

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
			Course, Enrollment, and Instructor so that academic data can be stored and managed efficiently.			
Sprint-2	Data Modeling	USN-3	As a user, I want dedicated tabs for each object so that I can easily navigate between students, courses, enrollments, and instructors.	3	High	Member3
Sprint-2	Data Modeling	USN-4	As an admin, I want to create relevant fields such as student details, course information, and enrollment status so that complete records can be captured accurately.	5	High	Member4
Sprint-2	Data Modeling	USN-5	As an enrollment officer, I want a centralized Lightning App so that I can access all academic operations from one interface.	3	High	Member4
Sprint-2	Data Modeling	USN-6	As an admin, I want to define relationships between students, courses, and enrollments so that the system can logically link and track academic activities.	5	Medium	Member1
Sprint-2	Data Modeling	USN-7	As a user, I want customized page layouts so that only relevant information is displayed, improving clarity and ease of data entry.	5	High	Member2

Sprint-3	Automation	USN-8	As a system, I want to validate input data such as mandatory fields and enrollment limits so that incorrect or incomplete records are prevented.	3	High	Member4
Sprint-3	Automation	USN-9	As a system, I want automated flows to handle enrollment processing and notifications so that manual effort is reduced and processes become faster.	3	High	Member4
Sprint-3	Automation	USN-10	As an administrator, I want an approval process for enrollment requests so that registrations are verified before confirmation.	5	High	Member1
Sprint-4	Security	USN-11	As an admin, I want to configure rolebased security so that users can only access data relevant to their responsibilities.	5	High	Member2

Sprint-5	Reports	USN-12	As a manager, I want reports on student enrollments, course registrations, and instructor assignments so that I can monitor academic operations.	4	High	Member3
Sprint-6	Dashboards	USN-13	As a manager, I want visual dashboards showing enrollment	4	Medium	Member4

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022		
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022		
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022		

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
			statistics and trends so that I can quickly analyze system performance.			

Project Tracker, Velocity & Burndown Chart: (4 Marks)

6. Project Development Phase:

Project Flow:

Milestone 1 – Salesforce Developer Account

Create a free Salesforce Developer account and set up the Salesforce environment for developing the SECMS application.

Milestone 2 – Create Objects Create four

custom objects:

Student – stores student details.

Course – stores course information.

Instructor – stores instructor details.

Enrollment – manages student course enrollment.

Milestone 3 – Create Tabs

Create custom tabs for Student, Course, Instructor, and Enrollment objects so users can easily access them from the Salesforce interface.

Milestone 4 – Create Lightning App

Create a dedicated SECMS Lightning App and add the required tabs and features for easy navigation.

Milestone 5 – Create Fields

Add necessary fields such as Student Name, Email, Phone, Course Name, Course Fee, Instructor Name, Enrollment Date, and Status.

Milestone 6 – Create Relationships

Establish relationships between objects. For example, Student → Enrollment → Course and Instructor → Course, allowing related information to be connected.

Milestone 7 – Customize Page Layouts

Arrange fields, sections, related lists, and buttons on each object's page layout to make the system user-friendly.

Milestone 8 – Create Validation Rules

Create rules to prevent incorrect data entry. For example, preventing enrollment when required information is missing or ensuring valid values are entered.

Milestone 9 – Create Flows

Use Salesforce Flow to automate processes such as updating enrollment status, sending notifications, or creating related records automatically.

Milestone 10 – Create Approval Process

Create an approval process for important actions, such as approving student enrollment requests before they are finalized.

Milestone 11 – Create Reports

Create reports to analyze system data, such as:

Students by course

Course enrollment details

Instructor-wise courses

Enrollment status

Milestone 12 – Create Dashboards

Create dashboards with charts and graphs to display important information such as total students, courses, enrollments, and enrollment status.

Milestone 13 – Configure Security

Configure Salesforce security using profiles, permission sets, roles, sharing settings, and object/field permissions to control user access.

Milestone 14 – Conclusion

The Student Enrollment & Course Management System provides a centralized Salesforce platform to manage students, courses, instructors, and enrollments. Automation, reports, dashboards, and security make the system efficient and easy to manage.

What you'll learn

Real-time Salesforce project implementation

Learn how to build and configure a real Salesforce project practically, not just theory.

Example: Create Student, Course, Instructor and Enrollment records.

Designing custom objects and relationships

Create your own objects and connect them with each other.

Example: An Enrollment is connected to a Student, Course and Instructor.

Creating page layouts & record types

Decide which fields appear on a record page and create different types of records.

Example: Enrollment can have:

New Enrollment

Re-Enrollment

Writing validation rules

Validation rules prevent users from entering incorrect data.

Example: If fees are not paid, the enrollment should not be approved.

Building automation with flows

Salesforce Flow automatically performs tasks when certain conditions happen.

Example: When enrollment is approved → automatically update the student's status.

Creating approval workflows

Sends a record to the appropriate person for approval.

Example: Enrollment Request → Training Manager → Approve/Reject.

Developing reports & dashboards

Reports show data in an organized format, while dashboards display important information visually.

Example:

Students by Status

Enrollments by Course

Pending Approvals

Revenue Report

Setting up security with profiles, permission sets, and sharing

Controls who can see, create, edit, or delete data.

Example:

Admin: Full access

Enrollment Officer: Create/update enrollments

Instructor: View assigned enrollments

End-to-end application testing

Test the complete application from beginning to end to make sure everything works correctly.

Example: Create Student → Select Course → Create Enrollment → Approval → Instructor Assignment → Report

Milestone 1-Salesforce :

Introduction:

What Is Salesforce?

Salesforce is a cloud-based platform that provides tools for storing, managing, and accessing organizational data. In the Student Enrollment System, Salesforce is used to manage student details, course information, enrollment records, and approval processes.

It provides a centralized platform for maintaining all student and course-related information.

Student details such as name, email, phone number, and enrollment status can be stored securely.

Course information such as course name, category, duration, and fees can also be managed easily.

The system helps staff create and track student enrollment records efficiently.

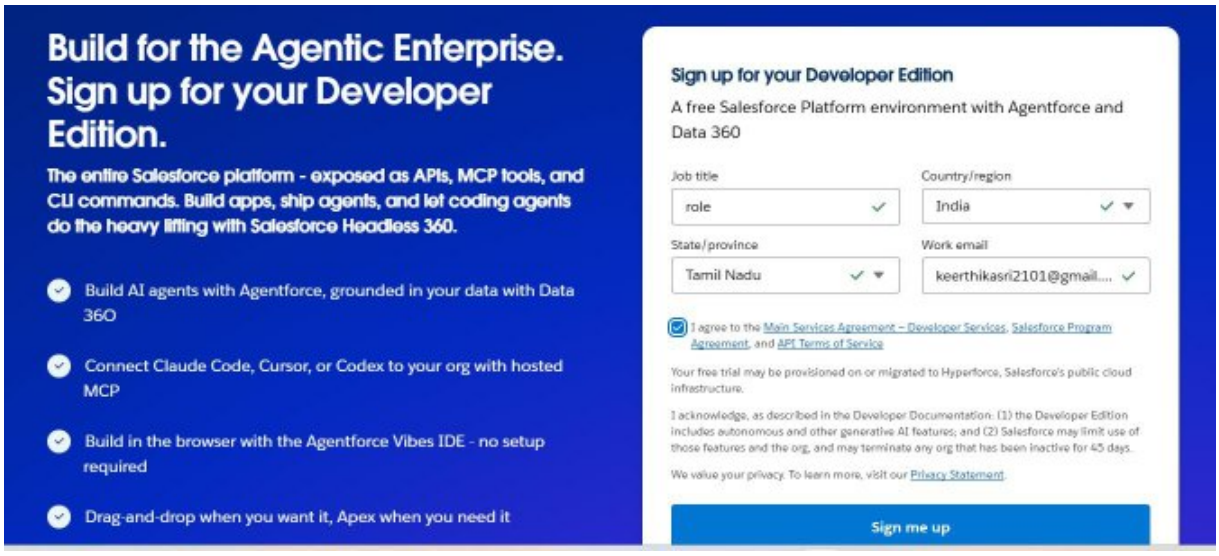

Salesforce automation and approval processes help reduce manual work and improve accuracy.
Overall, Salesforce makes the Student Enrollment System organized, efficient, and easy to manage.

https://youtu.be/r9EX3lGde5k

Activity 1: Creating Developer Account:

Creating a developer org in salesforce.

Go to https://developer.salesforce.com/signup

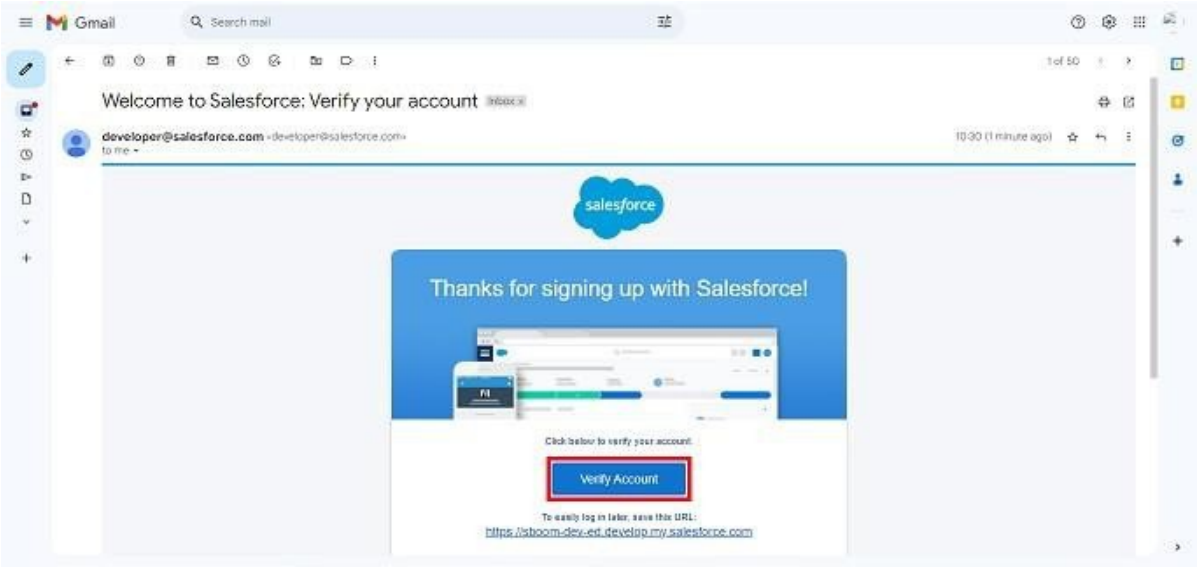

First name & Last name :
Email :
Role : Developer

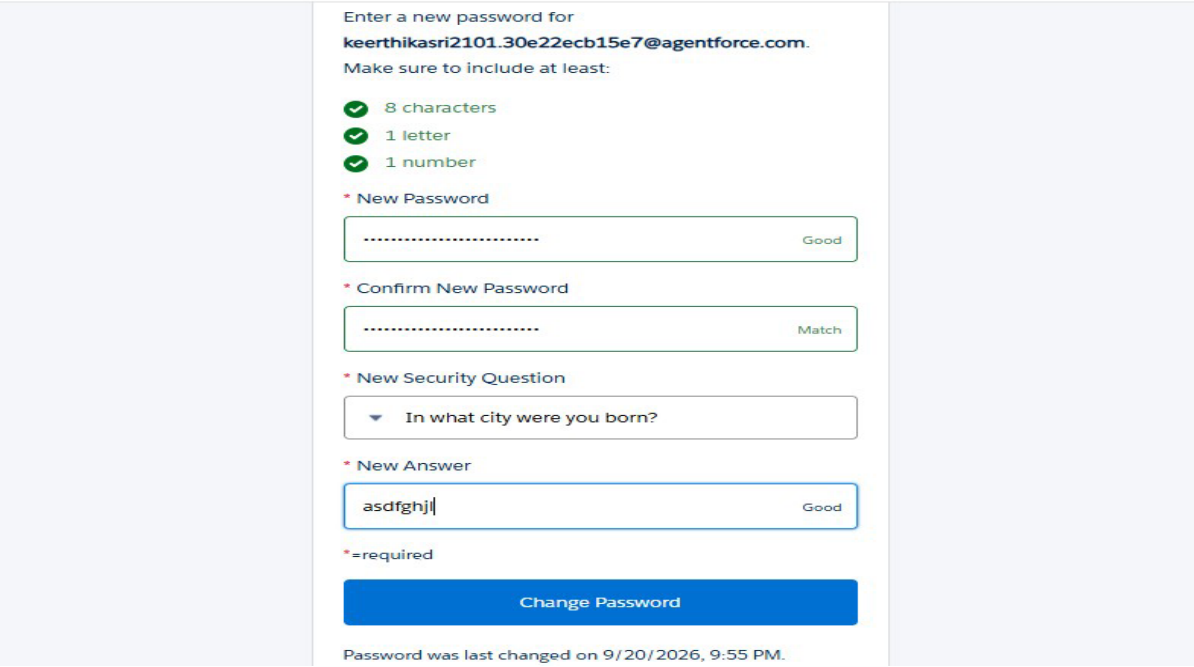

Company : College Name
County : India
Postal Code : pin code
Username : should be a combination of your name and company This need not be an actual email id, you can give anything in the format :
username@organization.com
Click on sign me up after filling these.

Activity 2: Account Activation:

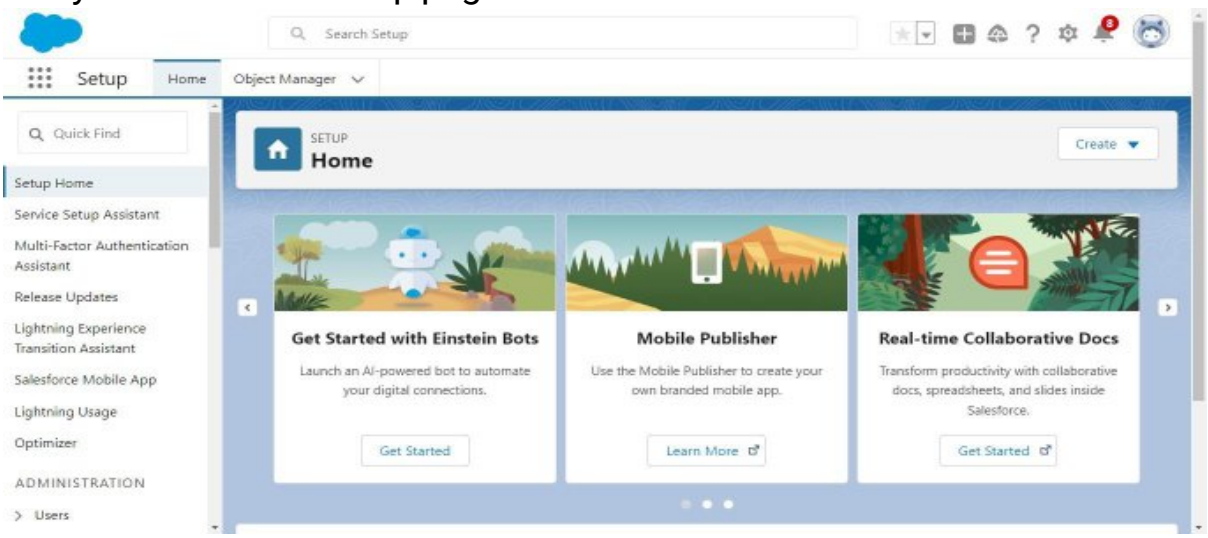

to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

ck on Verify Account
e a password and answer a security question and click on change password.

en you will redirect to your salesforce setup page.

Milestone 2 – Objects:

Activity 1: Creating Student Object:

The purpose of creating the Student custom object is to store and manage information about students such as their personal details, contact information, and enrollment status.

To create the Student object:

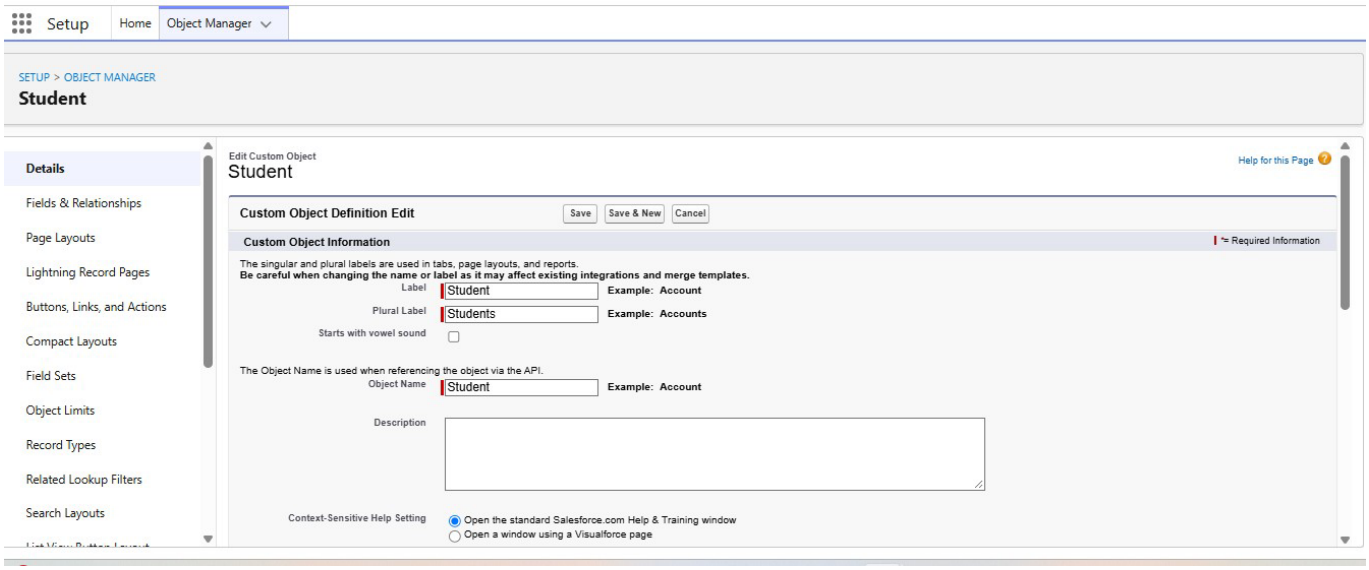

Go to the Setup page.

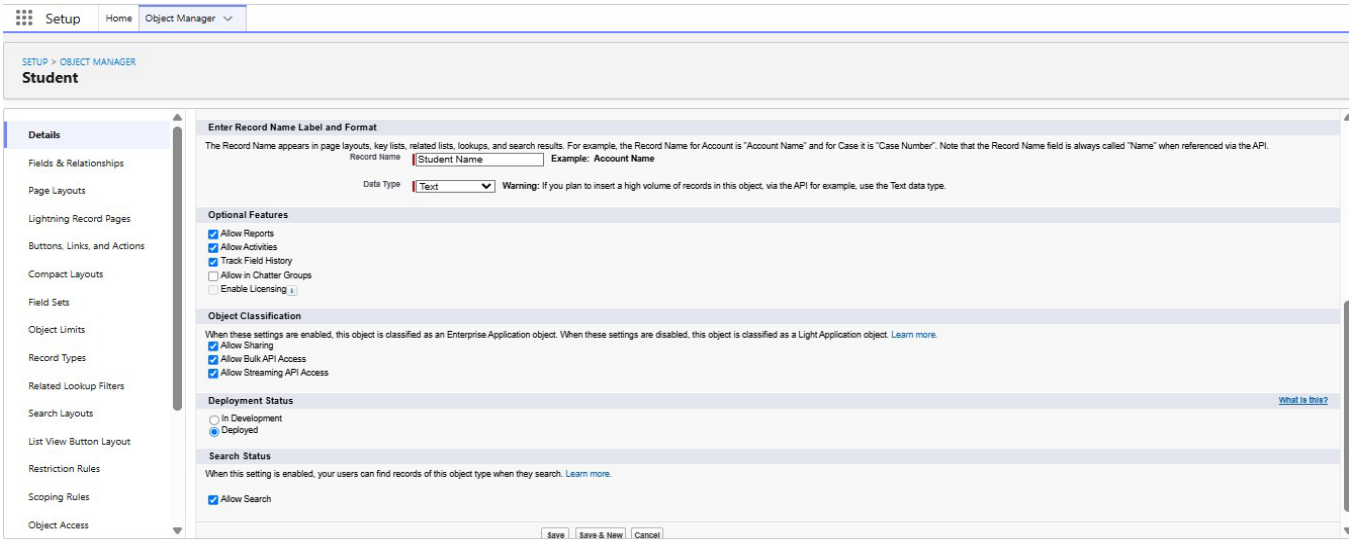

Click on Object Manager.

Click on Create → Custom Object.

Enter the details as below:

abel: Student
lural Label: Students
bject Name: Student
ecord Name: Student Name
ata Type: Text
nder Optional Features, select:
llow Reports
llow Activities (optional but recommended) 9. Track Field History (optional, if you want)
Under Search Status, select:
Allow Search
Click Save.

In the same way Create Courses, Instructors, and Enrolments objects

Milestone 3 - Fields:

Table 1: Student Object Fields:

Field Label	Data Type
Student Name	Text (Standard)
Email	Email
Phone	Phone
Date of Birth	Date
Student Status	Picklist
Address	Text Area

Field Label	Data Type
Course Name	Text (Standard)
Category	Picklist
Duration	Number/ Text
Course Fee	Currency
Description	Text Area

Table 2: Course Object Fields:

Table 3: Instructor Object Fields:

Field Label	Data Type
Instructor Name	Text (Standard)
Instructor Code	Text
Expertise	Picklist
Phone	Phone
Email	Email

Table 4: Enrollment Object Fields:

Field Label	Data Type
Student	Lookup (Student)
Course	Lookup (Course)
Instructor	Lookup (Instructor)
Enrollment Date	Date

Enrollment Status	Picklist
Fees Paid	Checkbox
Total Amount	Currency
Comments	Text Area

Milestone 4 – Create Relationships:

tivity 1: Create Lookup from Enrollment to Student:

1. Go to Setup → click Object Manager.

pe Enrollment in Quick Find → click Enrollment__c object.

ck Fields & Relationships → click New. 4. Select Lookup Relationship → click Next.

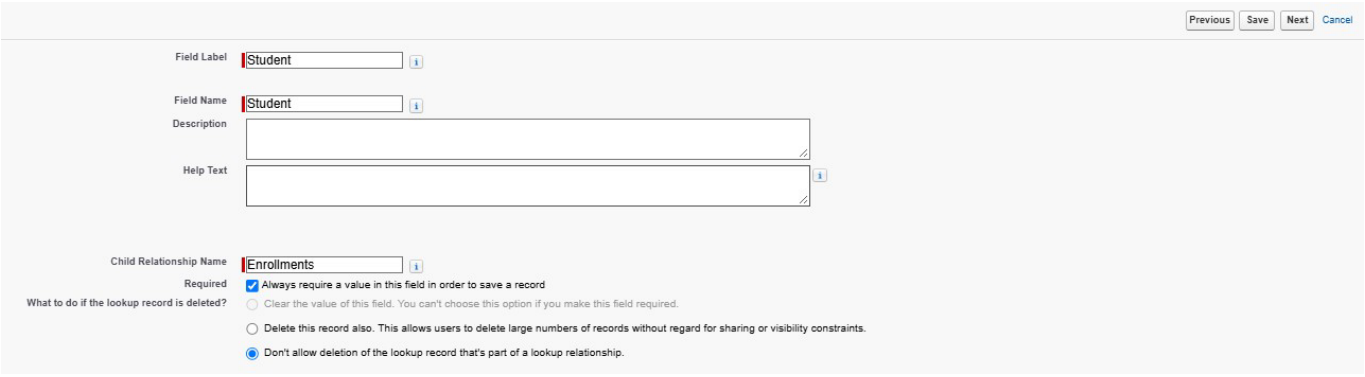

Related To, select Student__c → click Next.

er Field Label: Student (API Name: Student__c).

ck Next through Field-Level Security and Layout options (ensure it's visible and added to layout).

ck Save.

Activity 2: Create Lookup from Enrollment to Course

Purpose:

To link each Enrollment to a Course.

Steps:

Go to Setup → Object Manager → Enrollment__c.

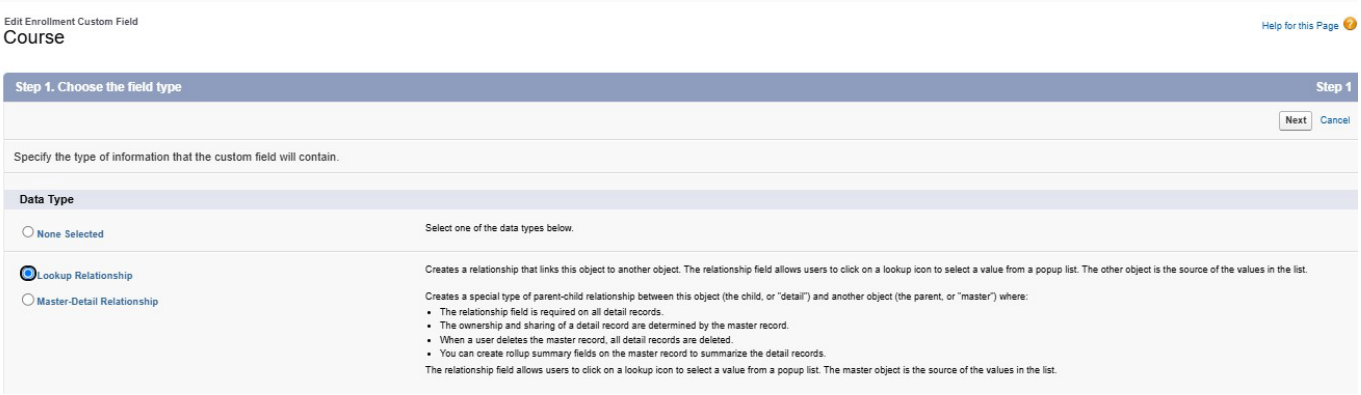

Click Fields & Relationships → New.

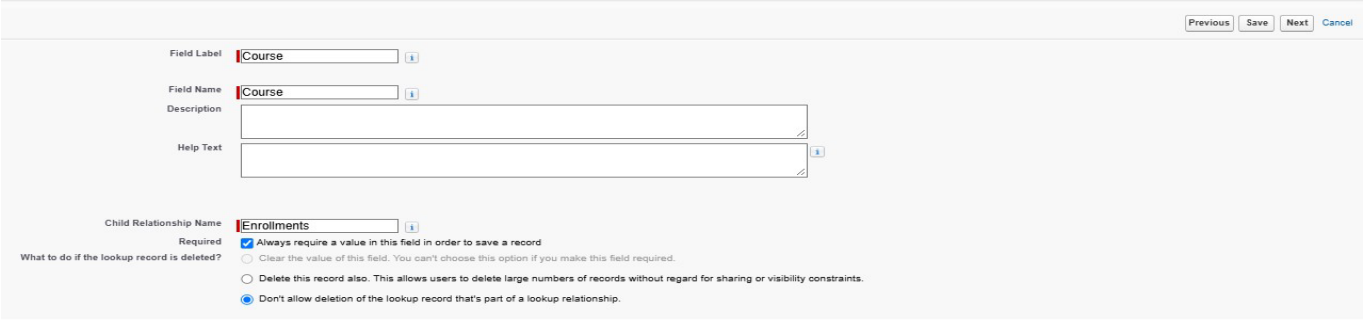

Select Lookup Relationship → Next.

Related To: select Course__c → click Next.

Field Label: Course (API Name: Course__c).

Click Next (set visibility and layout) → Save.

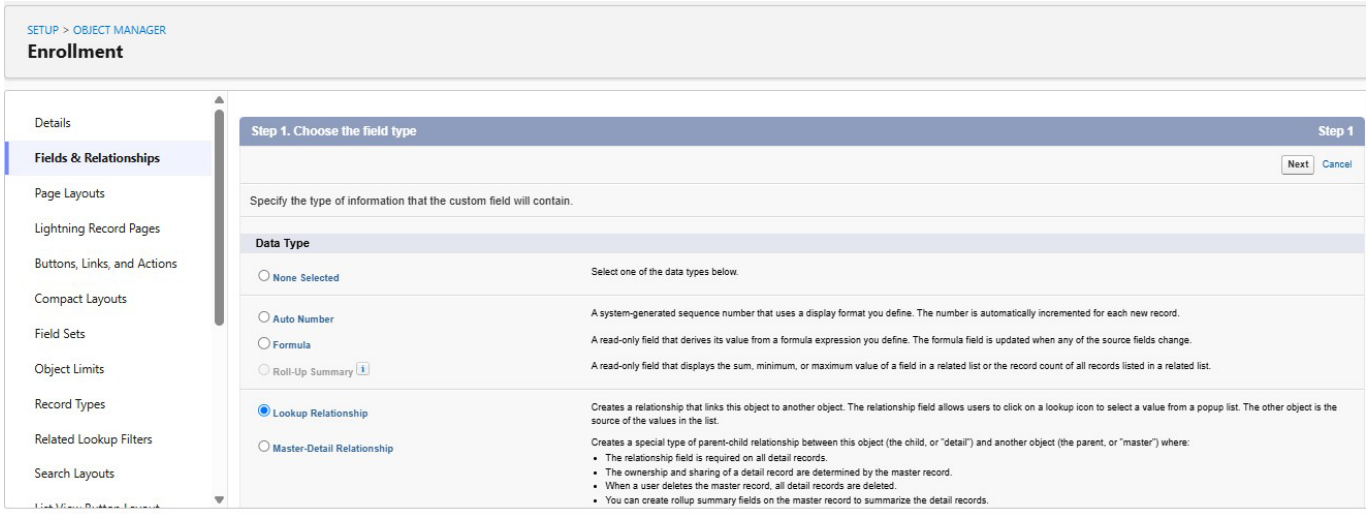

Activity 3: Create Lookup from Enrollment to Instructor:

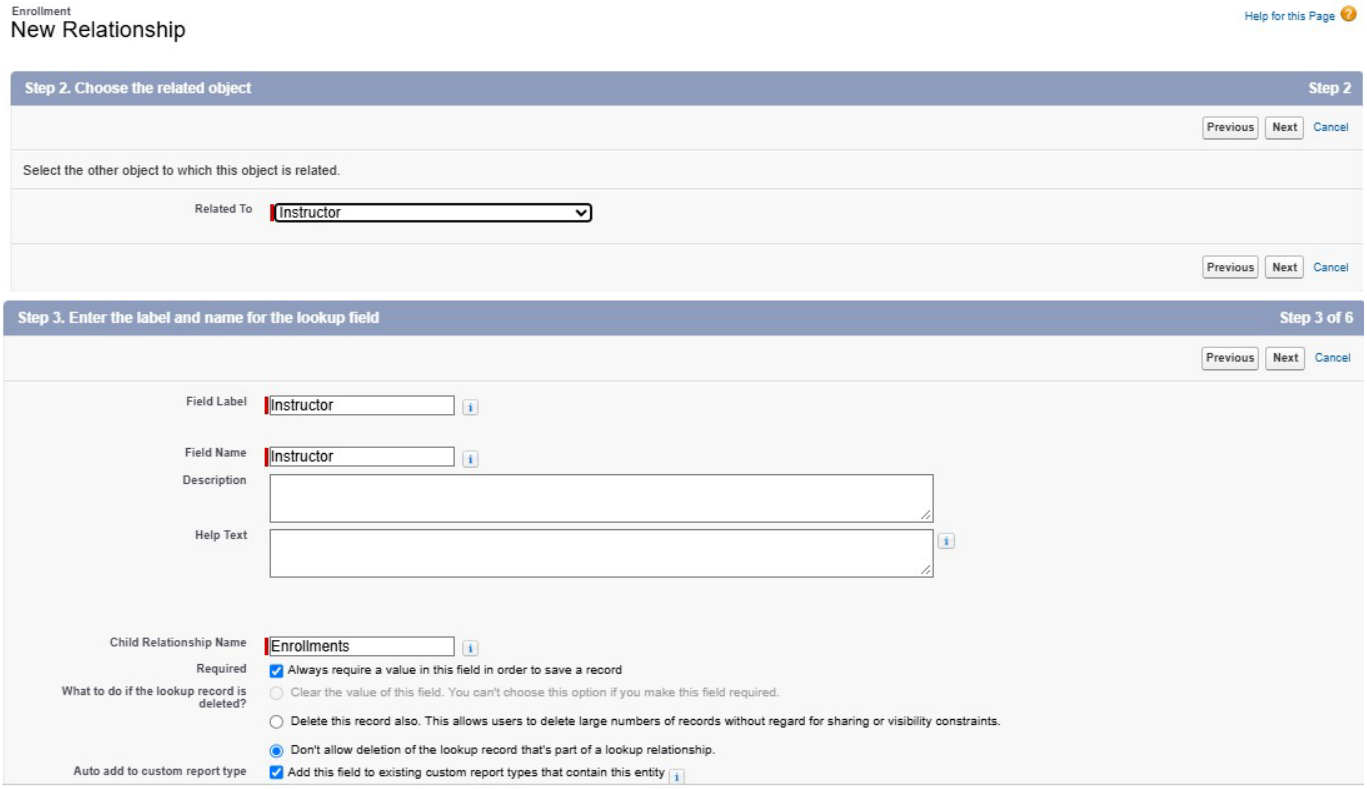

Purpose:

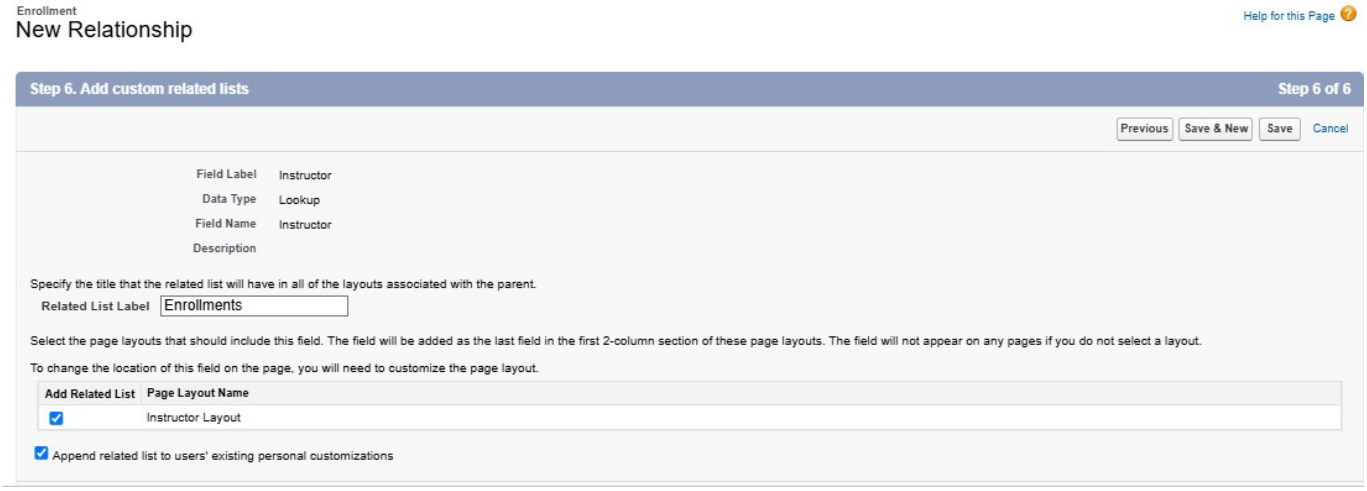

To store which Instructor is assigned to a particular Enrollment.

Steps:

Go to Setup → Object Manager → Enrollment__c.
Click Fields & Relationships → New.
Choose Lookup Relationship → Next.
Related To: select Instructor__c → Next.
Field Label: Instructor (API Name: Instructor__c).
Complete Field-Level Security and Page Layout options → Save

Milestone 5- Vallidation Rules:

Activity 1: Student Email Domain Validation

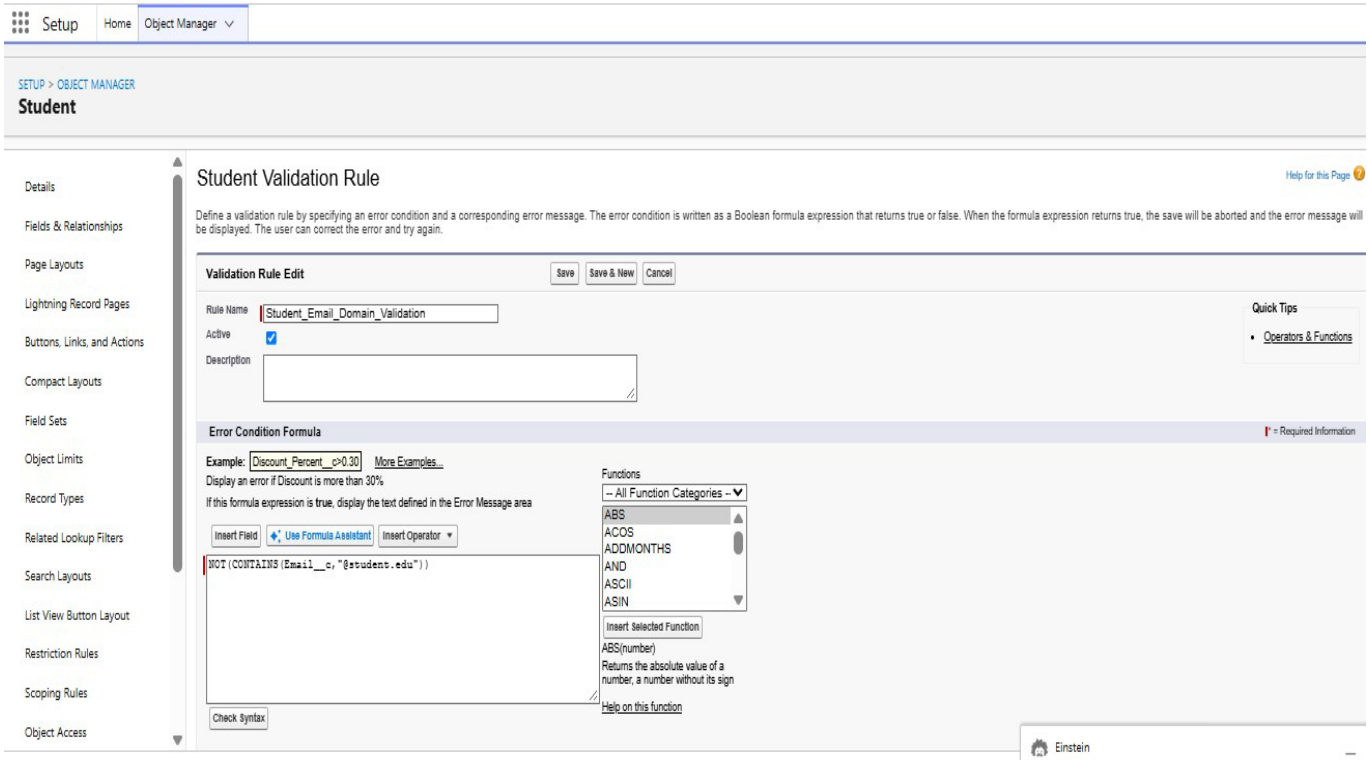

Purpose:
To ensure students use only allowed institutional email addresses.

Steps:

Go to Setup → Object Manager → Student__c.
Click Validation Rules → New.
Rule Name: Student_Email_Domain_Validation.
Error Condition Formula: (example for @student.edu)

```
NOT(CONTAINS(Email__c, "@student.edu"))
```

Error Message: Email must be a valid student institutional email.
Error Location: Field → Email__c. Click Save.

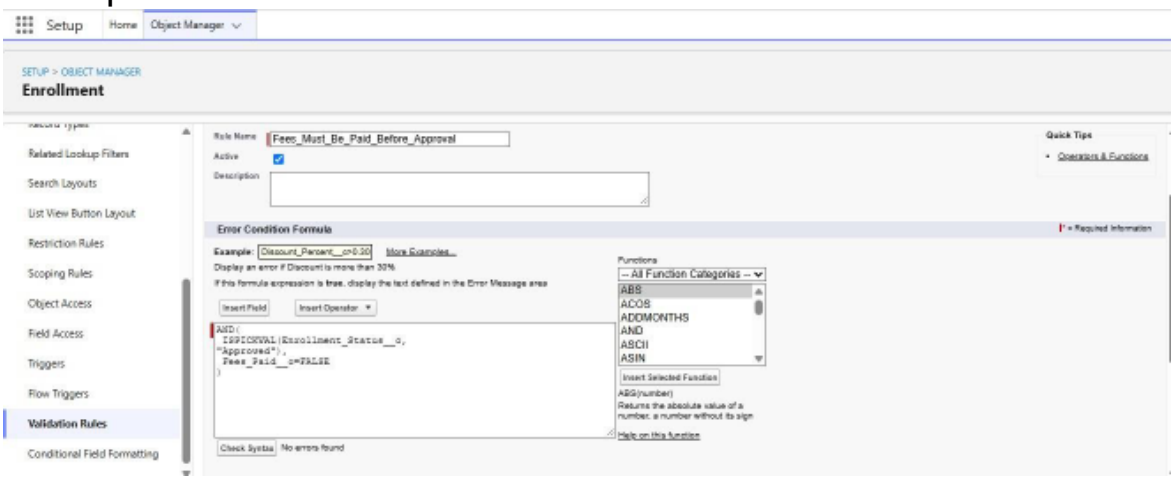

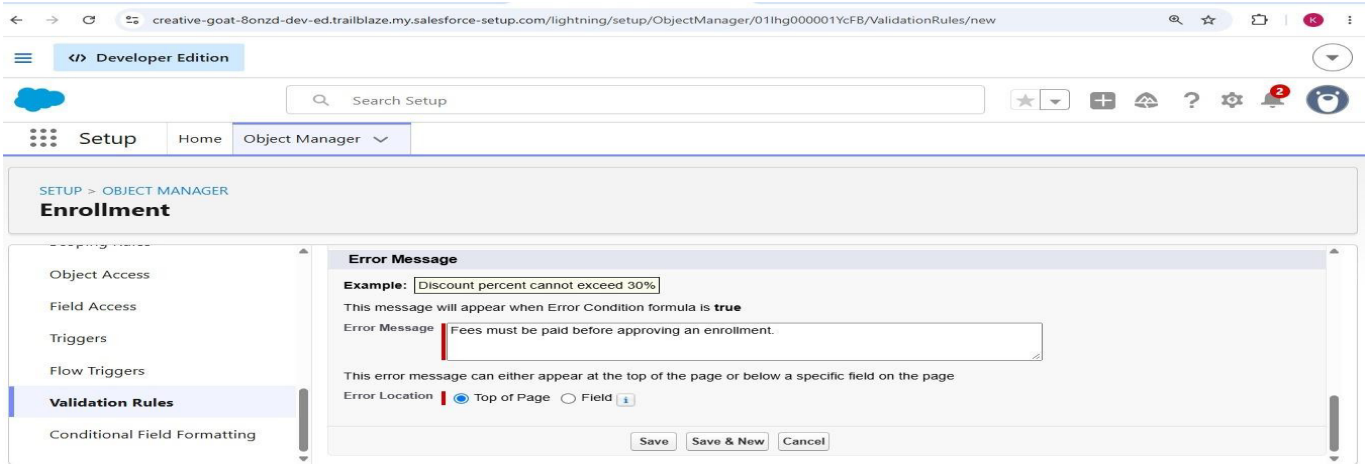

Activity 2: Fees Must Be Paid Before Approval

Purpose:
Route Enrollment requests to Training Manager for approval or rejection.

Steps:

o Setup → Approval Processes → select Enrollment__c.
k Create New Approval Process → Use Standard Setup.
ess Name: Approval_Enrollment_Request.
y Criteria: Enrollment_Status__c = "Requested".
e and configure steps.

Milestone 6 – Approval Process Activity

1: Create Approval Process for Enrollment Requests Purpose:

Route Enrollment requests to Training Manager for approval or rejection.

Steps:

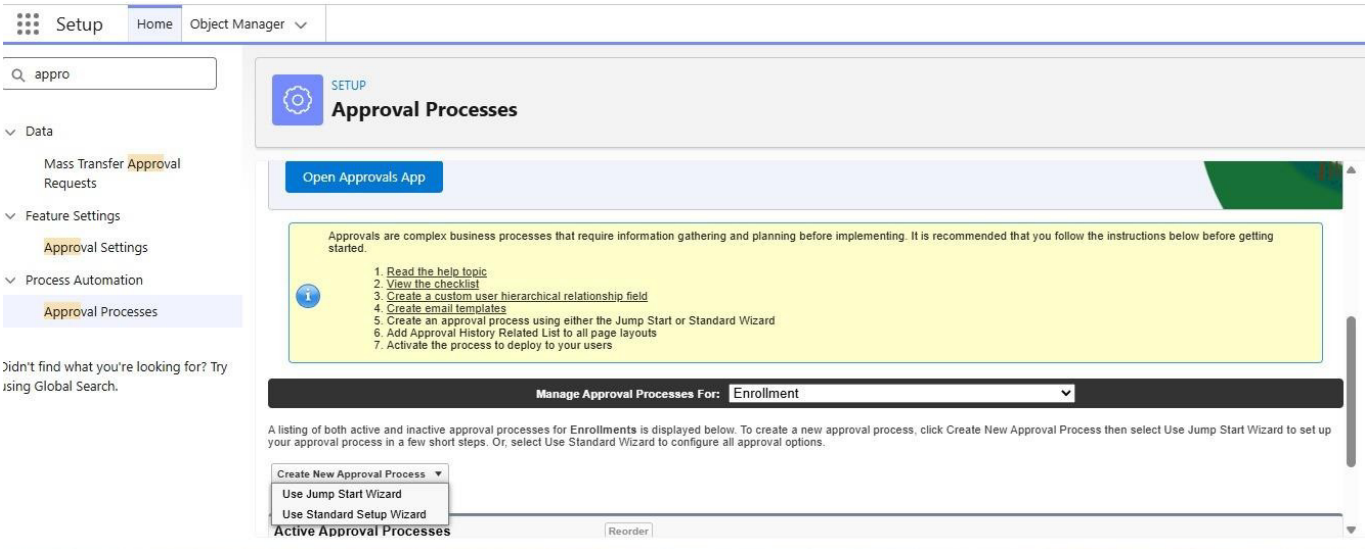

Setup → Approval Processes → select Enrollment__c.

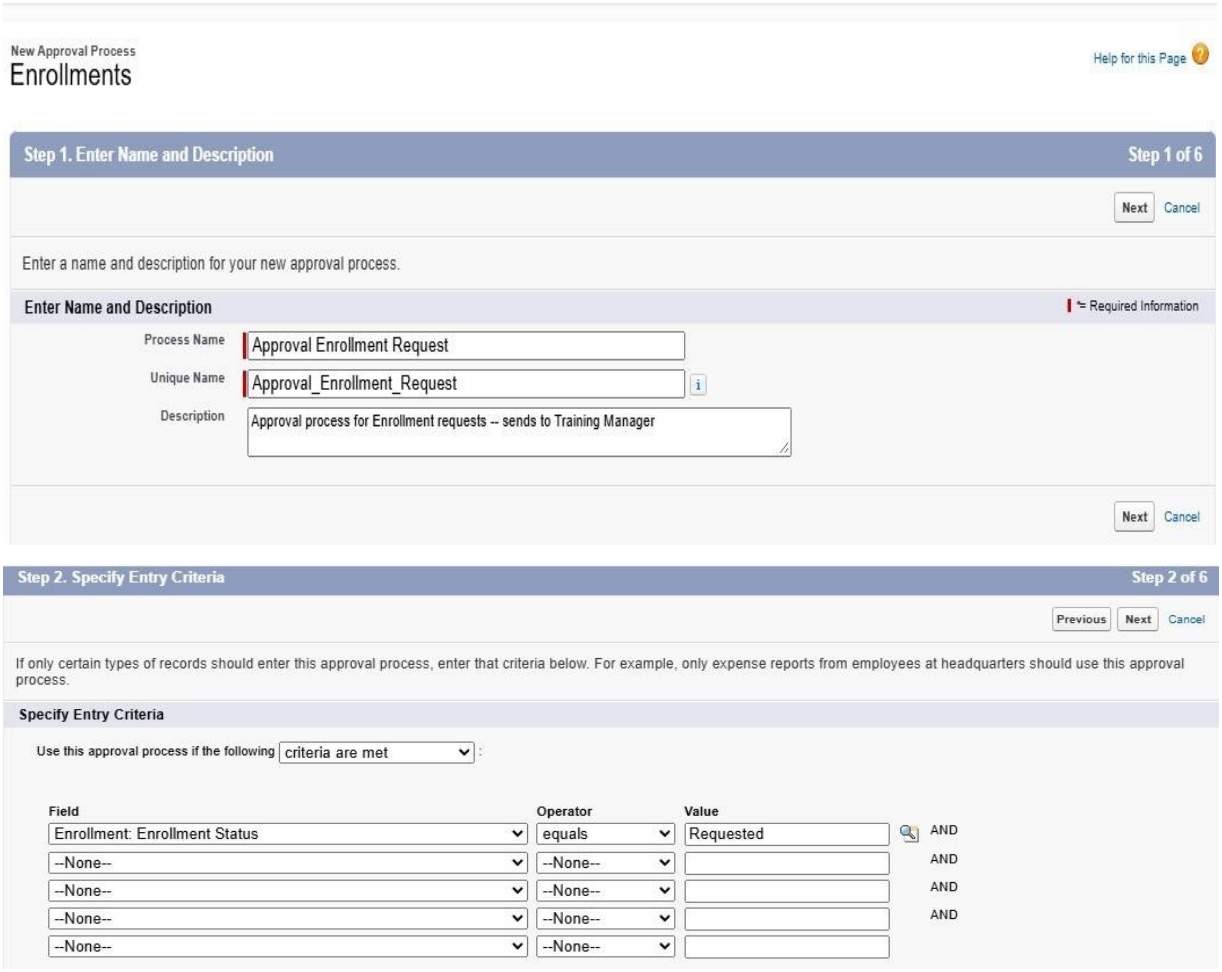

Create New Approval Process → Use Standard Setup.

ess Name: Approval_Enrollment_Request.

Criteria: Enrollment_Status__c = "Requested".

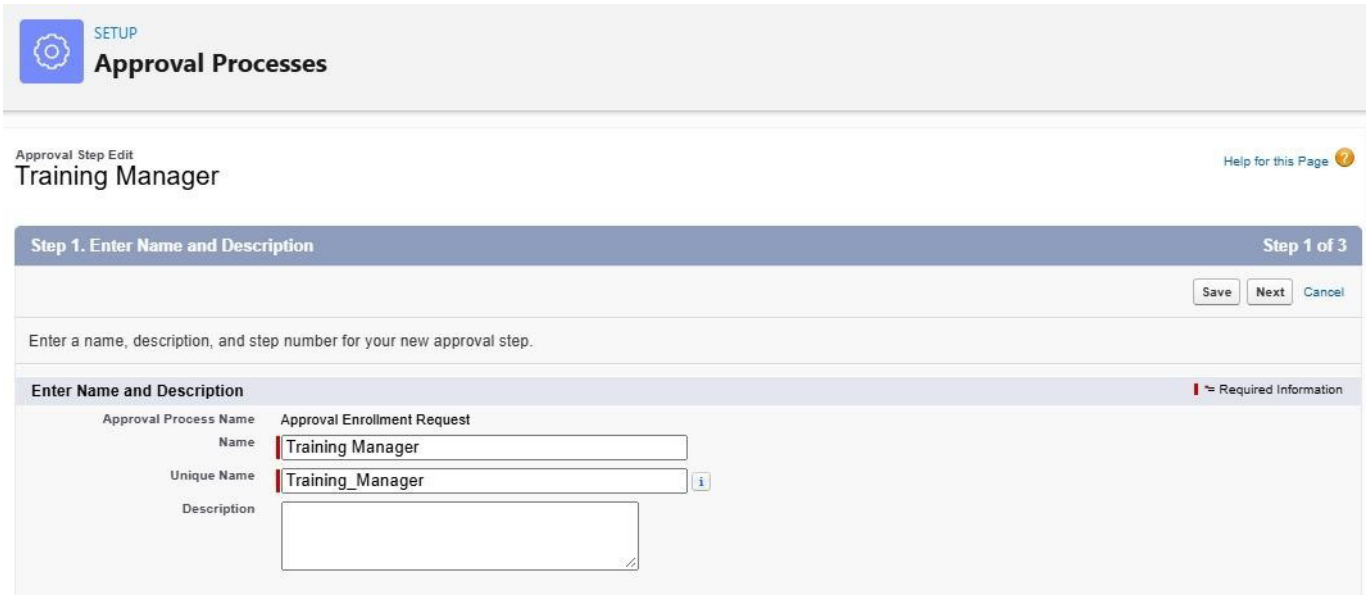

and configure steps.

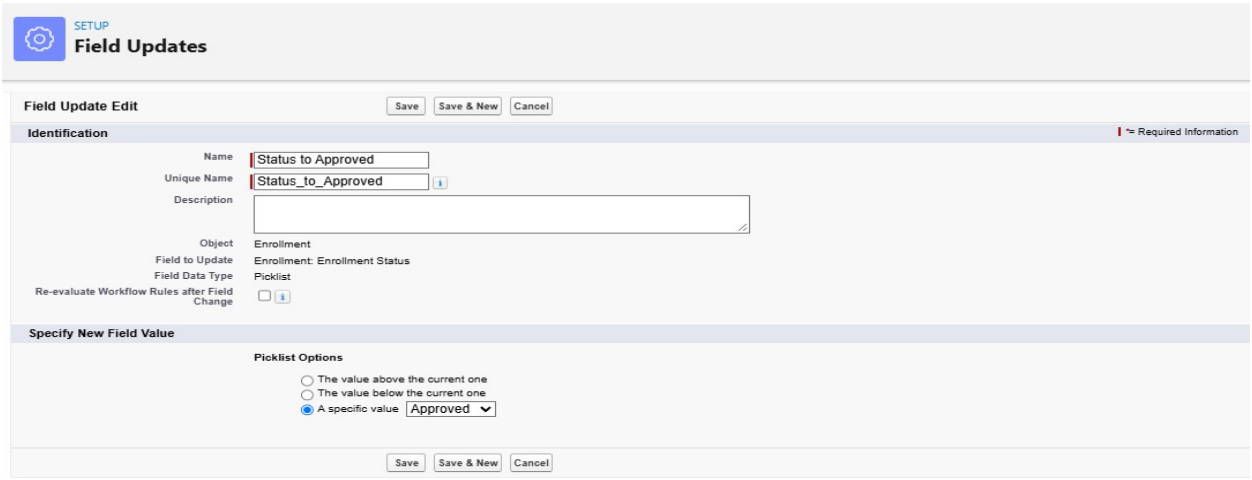

rover: specific Training Manager user.

er Final Approval Actions:

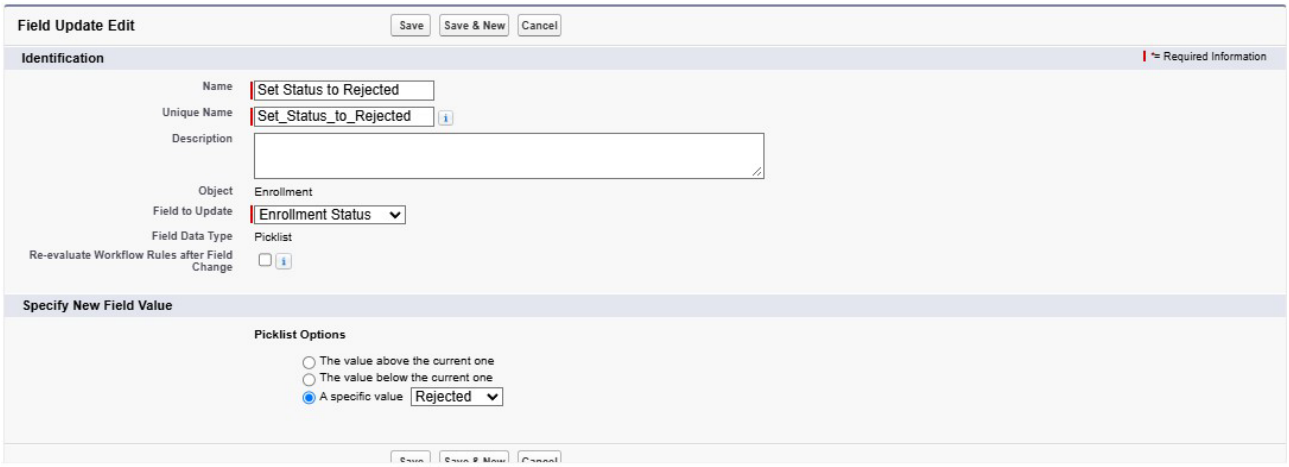

Field Update to set Enrollment_Status__c = "Approved".

er Final Rejection Actions:

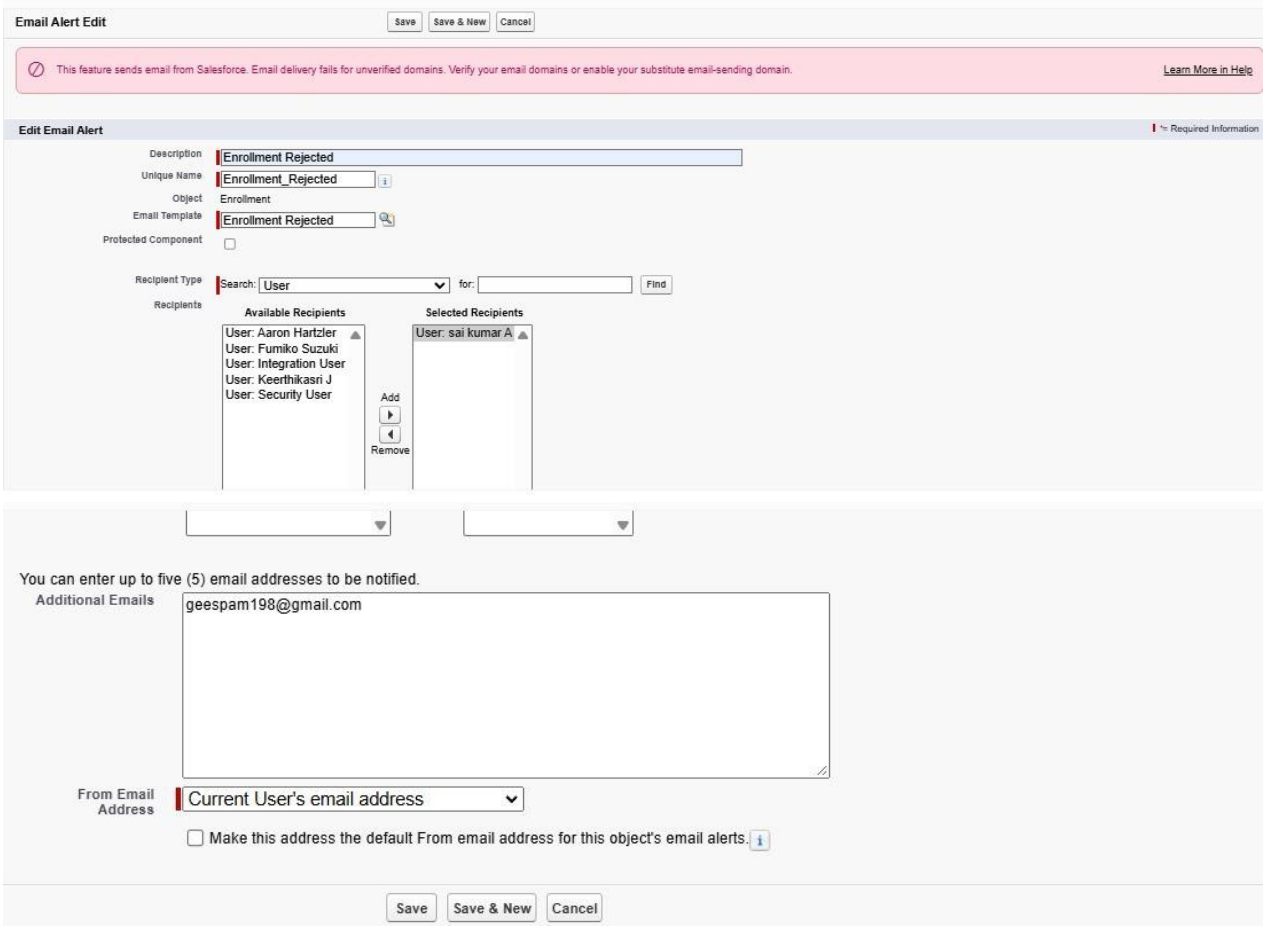

d Field Update to set Enrollment_Status__c = "Rejected".

d Email Alert to send rejection email to student.

tivate the approval process.

13.

13.Activate the approval process.

Milestone 7- Tabs

Activity 1: Creating a Tab for the Student Object:

Go to Setup.

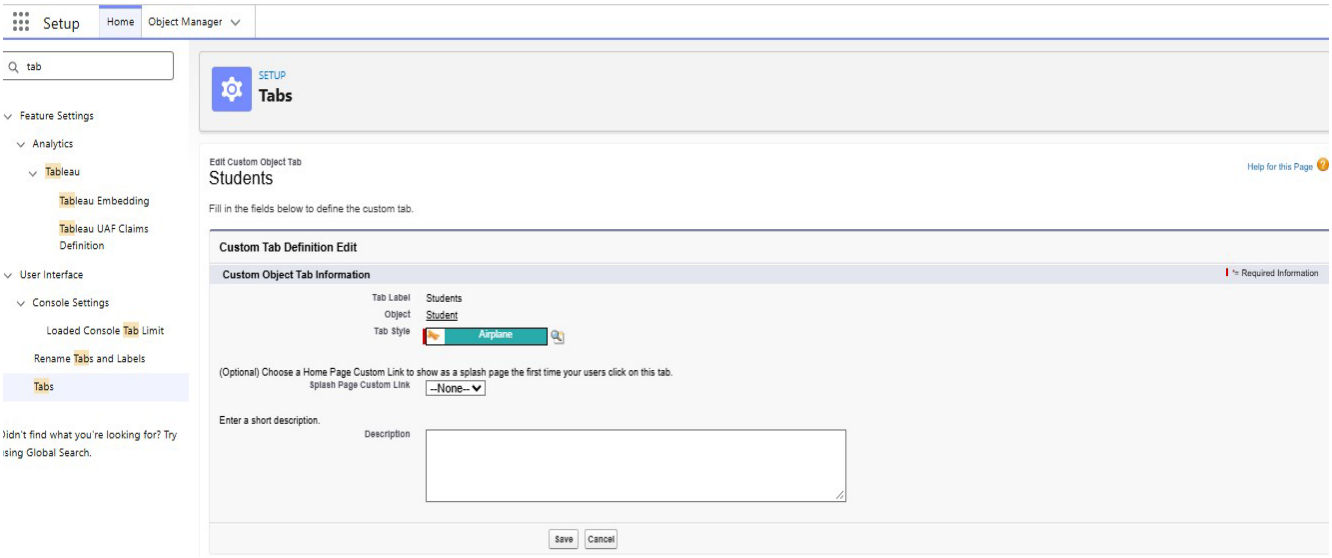

n the Quick Find box, type Tabs.

nder Custom Object Tabs, click New.

elect Student from the object list.

hoose a tab style (icon).

lick Next, assign it to all profiles, and then click Save.

Activity 2: Creating Remaining Tabs

Now create the Tabs for the remaining Objects, they are “Courses, Instructors, Enrollment”.

Follow the same steps as mentioned in Activity -1

Milestone 8 – The Lightning App

Activity 1: Creating the Lightning Application for the Project

Navigate to Setup.

Enter App Manager in the Quick Find search box.

Click New Lightning App.

Provide the app details:

App Name: Student Enrollment & Course Management

Developer Name auto-fills

Description: Optional, but can describe the purpose of the app

Click Next and choose the following settings:

App Branding (optional): Add logo or select color theme

Navigation Style: Choose Standard Navigation

Click Next and assign the app to specific profiles (e.g., Admin, Enrollment Officer, Instructor).

Click Next to select the items (tabs) to be included in the app. Add:

Student

Course

Instructor

Enrollment

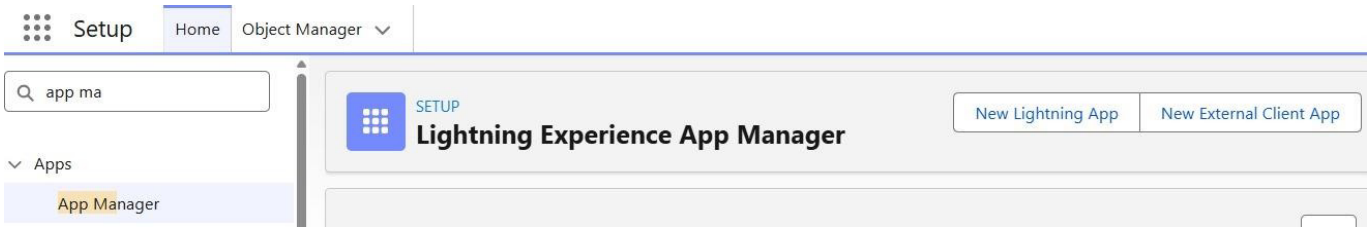

Reports

Dashboards

Home

Tasks Click Next and review the app settings.

Finally, click Save & Finish.

App Details & Branding

Give your Lightning app a name and description. Upload an image and choose the highlight color for its navigation bar.

App Details

*App Name: Student Enrollment & Course Management

*Developer Name: Student_Enrollment_Course_Management

Description: Enter a description...

App Branding

Image: Upload

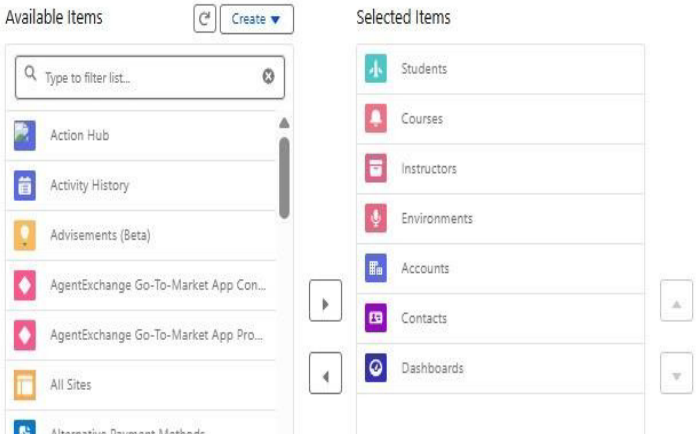

Primary Color Hex Value: #0070D2

Org Theme Options

Use the app's image and color instead of the org's custom theme

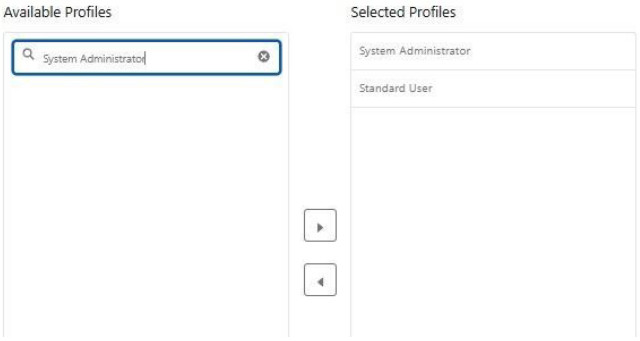

Navigation Items

Choose the items to include in the app, and arrange the order in which they appear. Users can personalize the navigation to add or move items, but users can't remove or rename the items that you add. Some navigation items are available only for phone or only for desktop. These items are dropped from the navigation bar when the app is viewed in a format that the item doesn't support.

User Profiles

Choose the user profiles that can access this app.

Milestone 9- Page Layouts and Record:

Activity 1: Create Record Types for Enrollment:

Purpose:

To separate New Enrollment vs Re-Enrollment processes.

Steps:

1. Go to Setup → Object Manager → Enrollment__c.

2. Click Record Types → New.

3. For the first record type:

Existing Record Type: Master

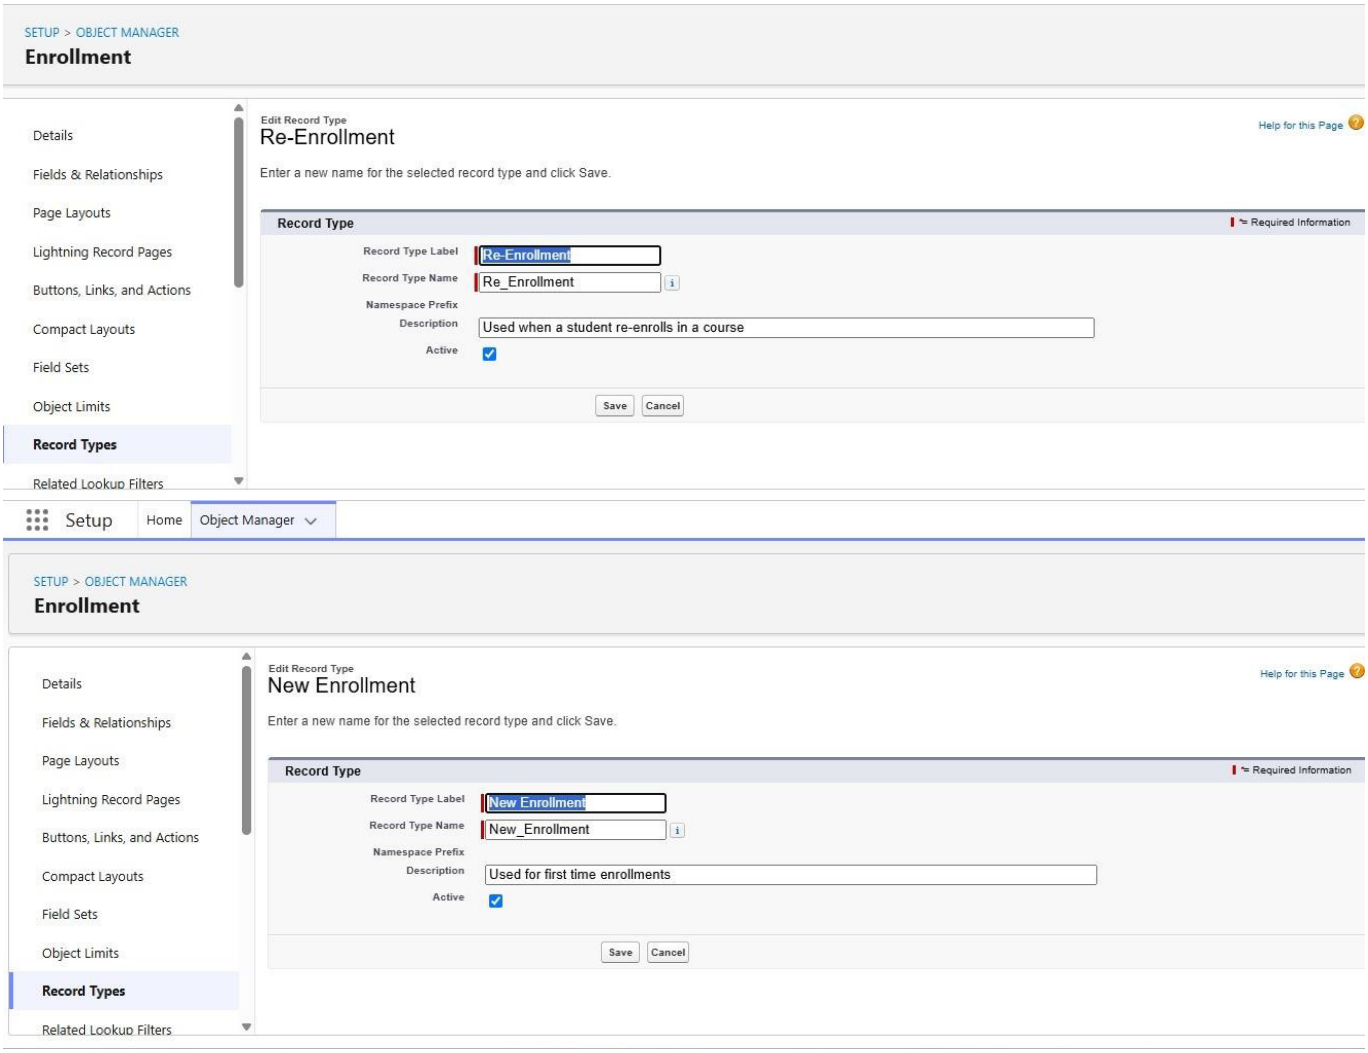

Record Type Label: New Enrollment

Enable for required profiles (Admin, Enrollment Officer). Select the default Page Layout → Save & New.

4. For the second record type:

Record Type Label: Re-Enrollment Enable for same profiles.

Select the default Page Layout → Save.

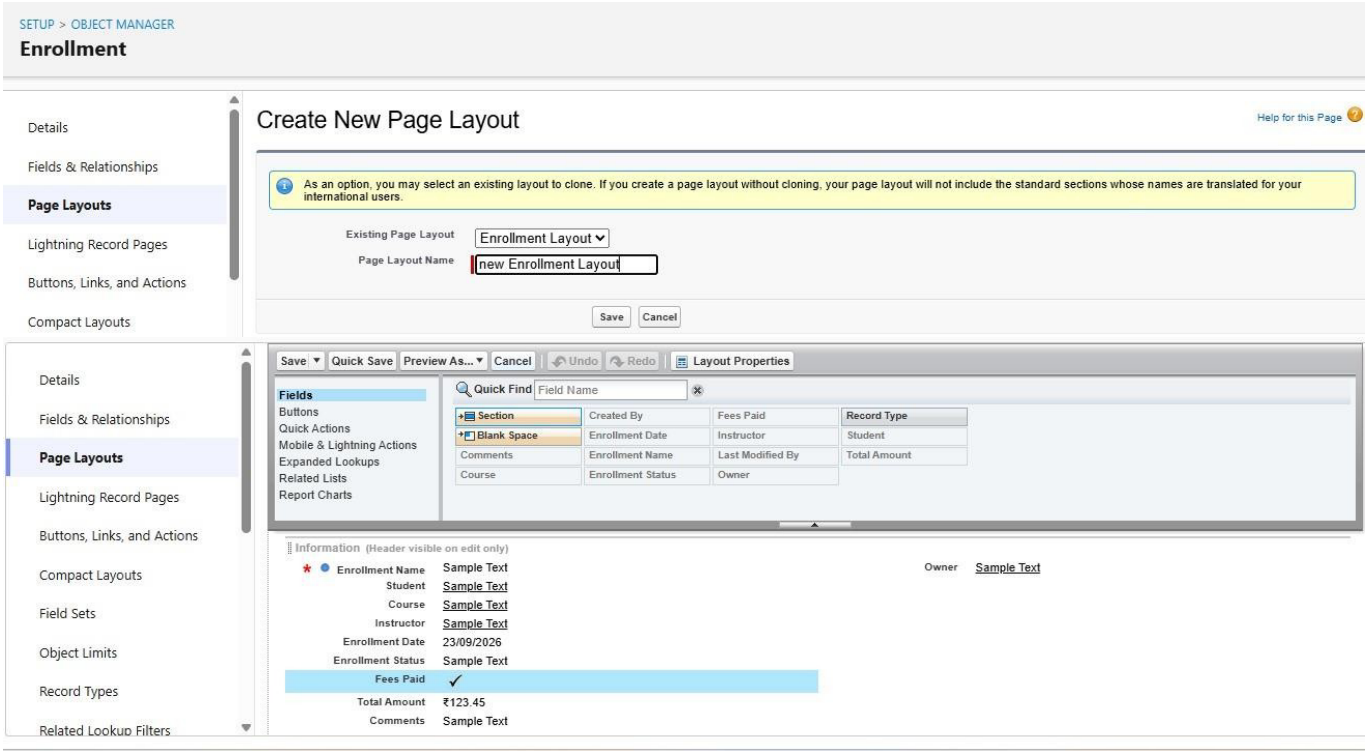

Activity 2: Separate Page Layo Createuts for Each Enrollment Record Type

Purpose:
To show different fields for New Enrollment vs Re-Enrollment.

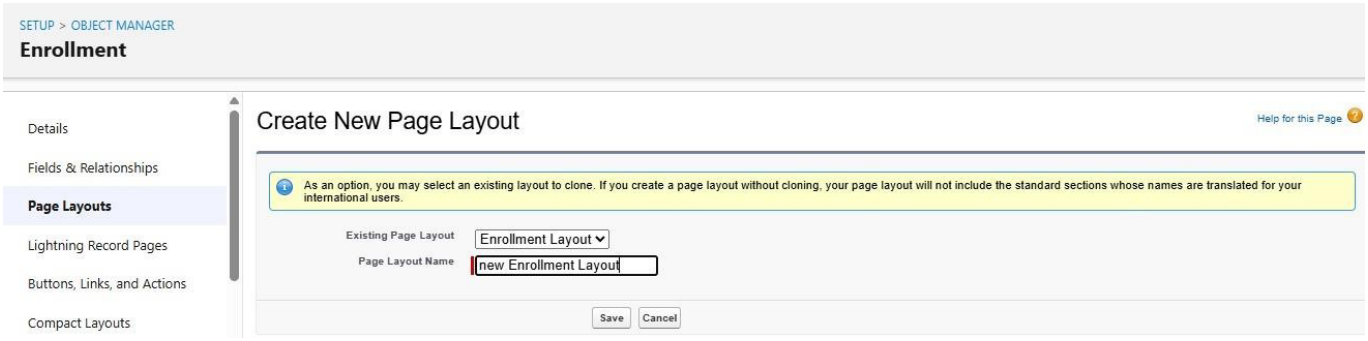

Steps:

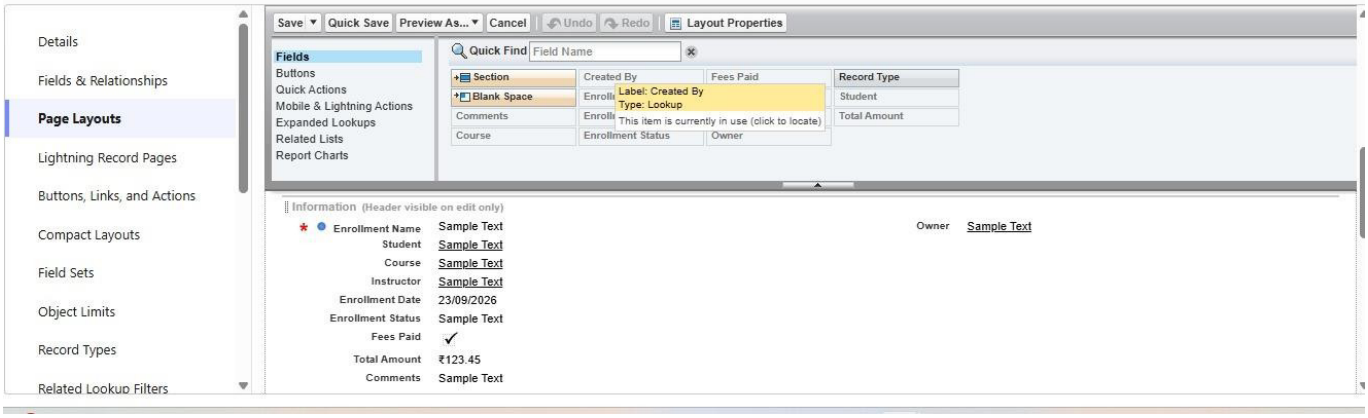

1.Enrollment__c object → click Page Layouts.
2.Click New to create a layout for New Enrollment:
lone from existing Enrollment Layout → name it New Enrollment Layout → Save.
eep fields relevant for first-time enrollment: Student, Course, Instructor, Enrollment Date,

tus, Fees, etc.
emove unnecessary re-enrollment fields if any. Click Save.

3.Again, click New to create Re-Enrollment Layout:
lone existing layout → name it Re-Enrollment Layout → Save.
clude fields like previous Enrollment reference (if any), Re-Enrollment Reason, Status, Fees, etc. Click Save.

4.Click Page Layout Assignment → Edit Assignment.
5.For each profile and record type:

ew Enrollment → use New Enrollment Layout.
6.Re-Enrollment → use Re-Enrollment Layout.
Click Save.

Activity 3: Enrollment R Addelated Lists to Parent Objects:

Purpose:
To see all Enrollments from Student, Course, and Instructor records. a) Student →
Enrollment Related List Go to Setup → Object Manager → Student__c.
Click Page Layouts → open the main layout. In the palette, select
Related Lists.
Drag Enrollments related list onto the layout.
Customize columns if needed → Save. b) Course
→ Enrollment Related List
Go to Object Manager → Course__c → Page Layouts.
Open layout → add Enrollments related list.
Save.
c) Instructor → Enrollment Related List
Go to Object Manager → Instructor__c → Page Layouts.
Open layout → add Enrollments related list. Save.

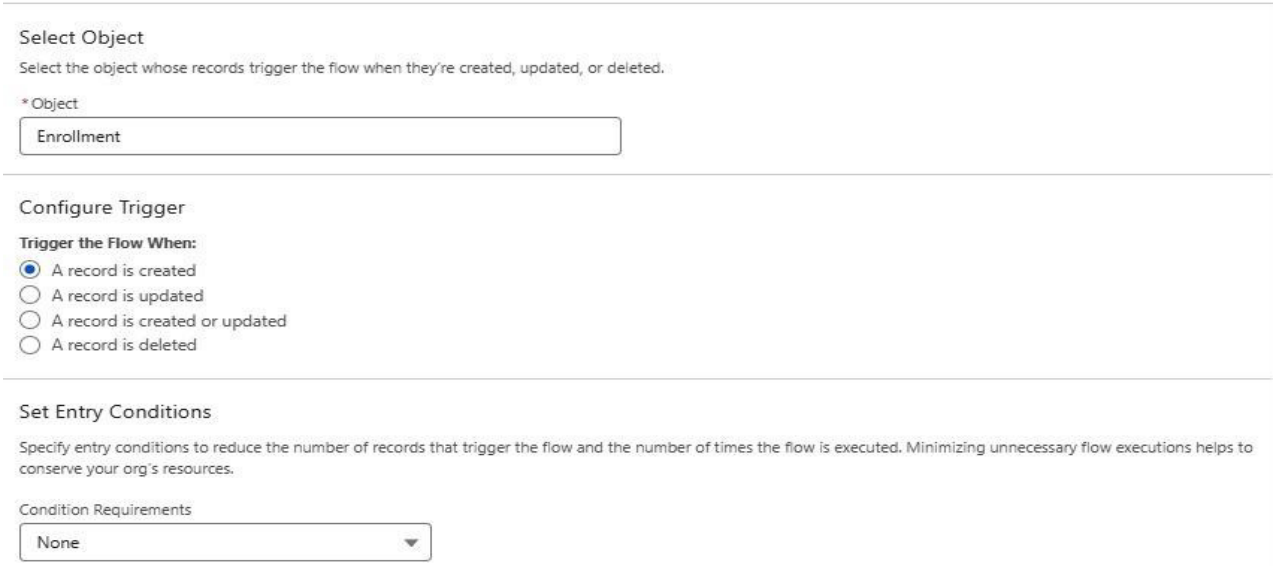

Milestone 10 – Automation with Flow

Activity 1: Auto-Populate Enrollment Date (Record-Triggered Flow)

Purpose:
Set Enrollment_Date__c to today when Enrollment is created.

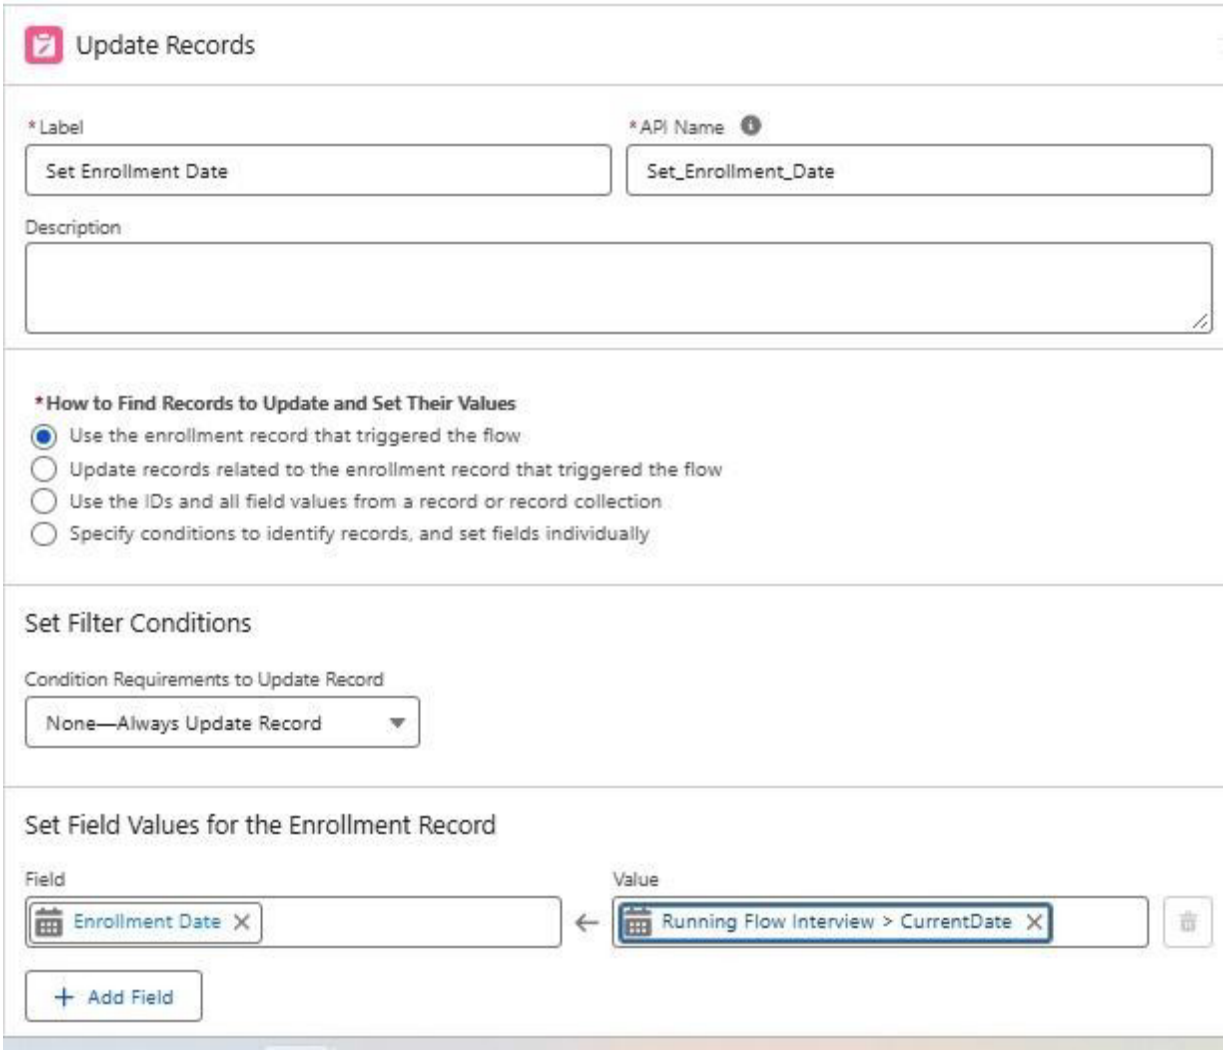

Steps:

Go to Setup → Flows → New Flow.
Select Record-Triggered Flow → Create.
Object: Enrollment__c.
Trigger: A record is created.
Optimize for Actions and Related Records → Done.

Add Update Records element: Label: Set Enrollment Date.

se record that triggered the flow.
eld: Enrollment_Date__c → Value: $Flow.CurrentDate.
7.Save as SetEnrollmentDate → Activate.

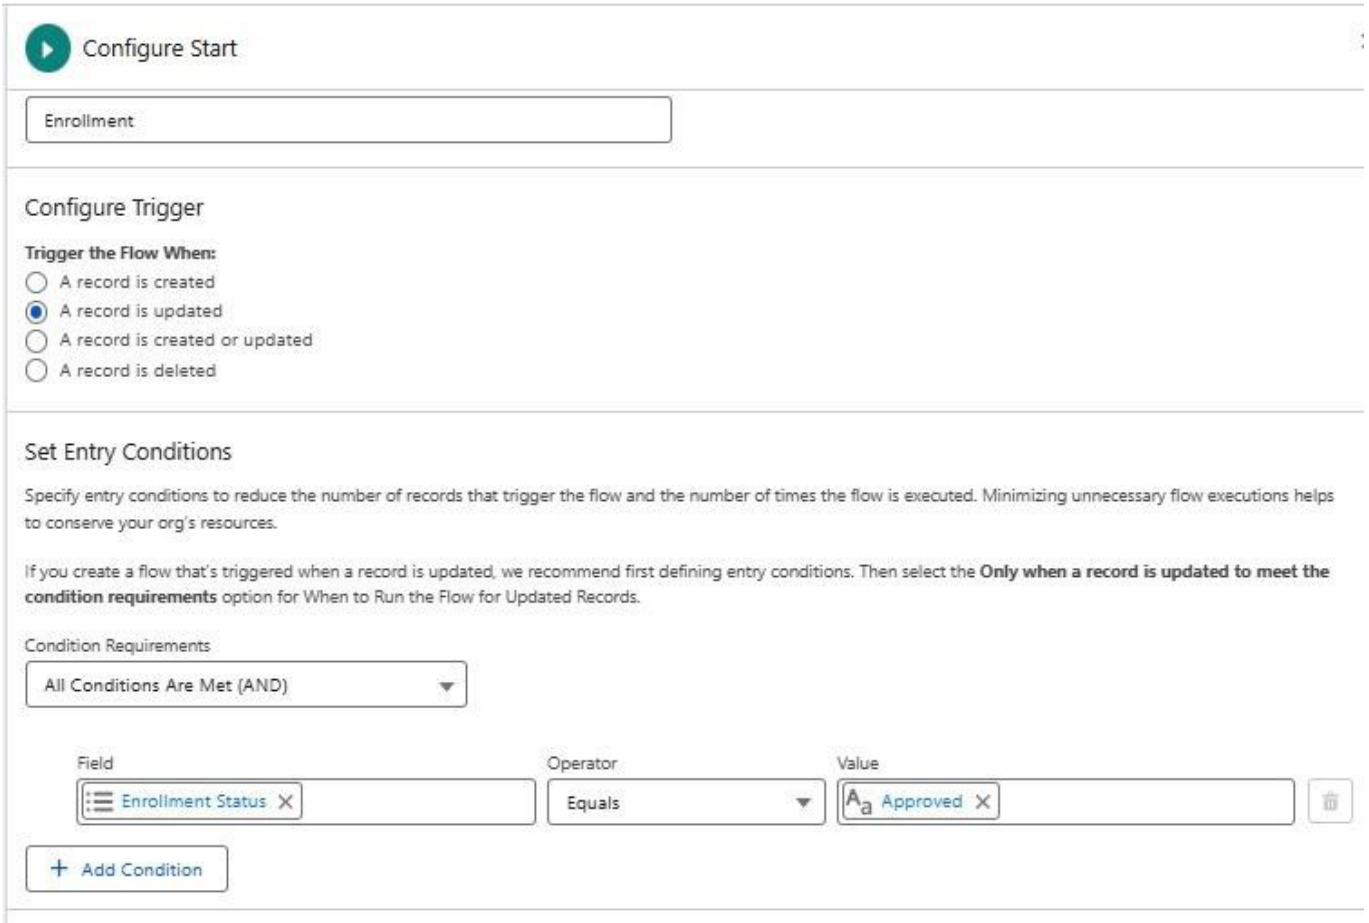

Activity 2: Send Email When Enrollment Approved

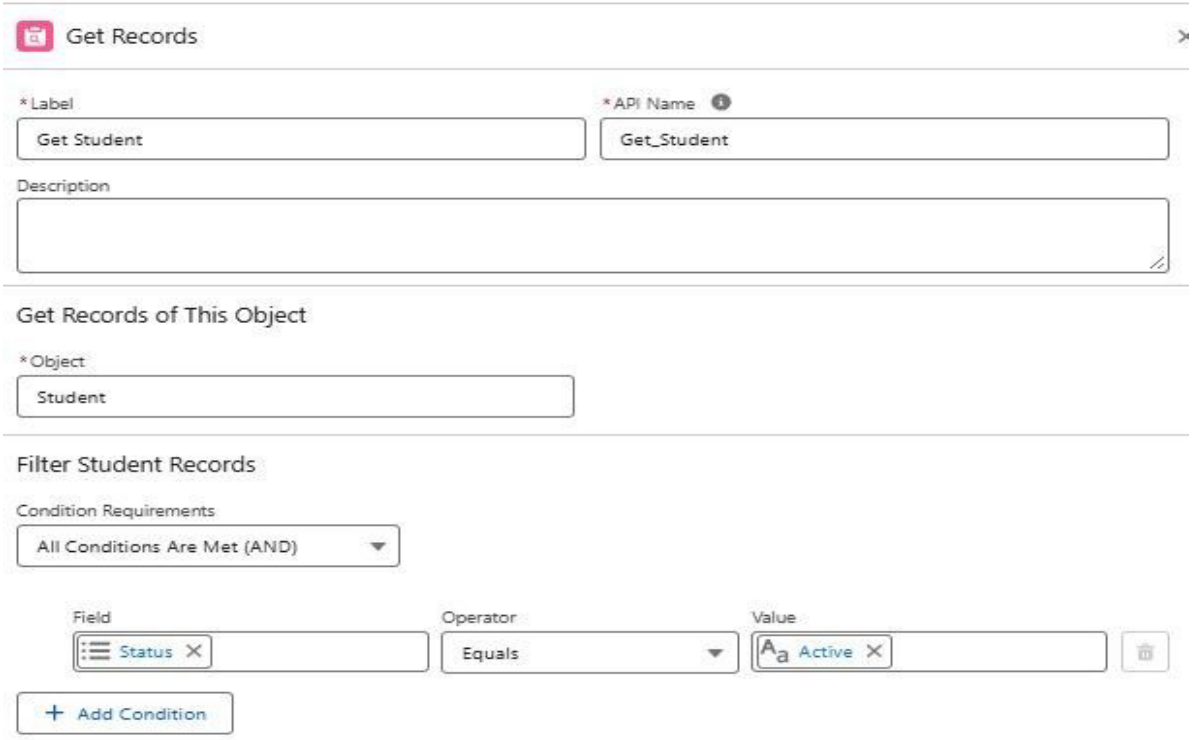

Purpose:
When Enrollment_Status__c = Approved, send email, alert admin, and set Student to Active.
Steps (high level for document):

reate Email Template and Email Alert for student notification.

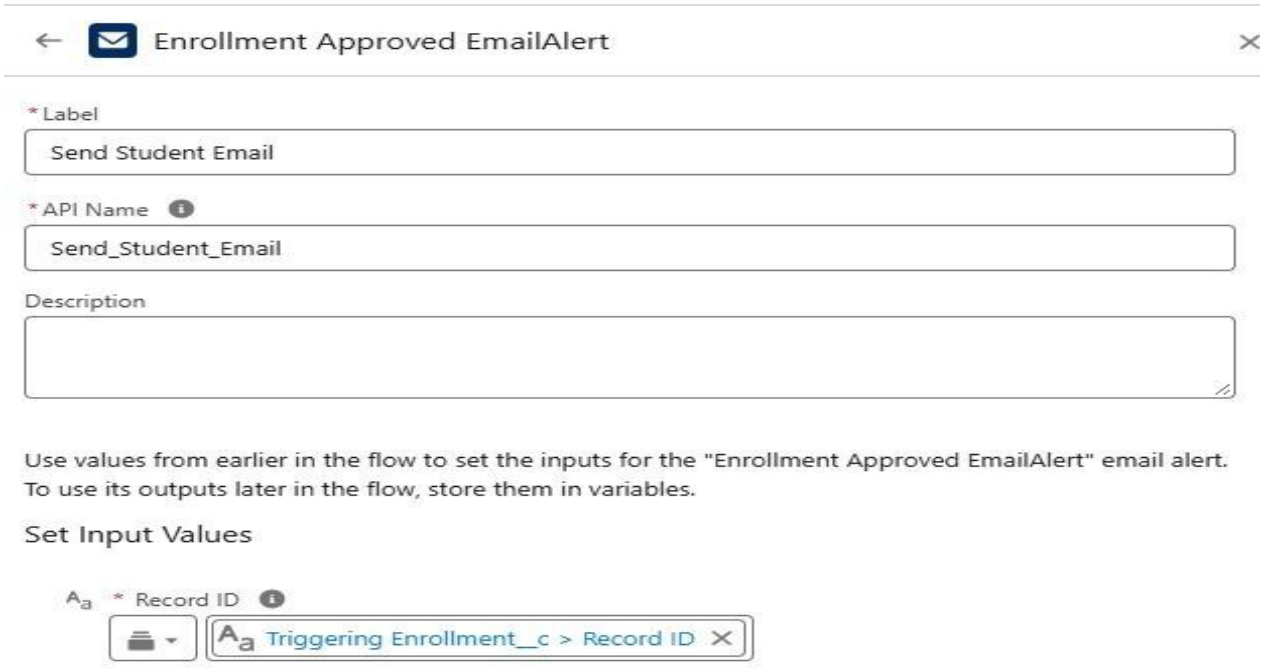

o to Flows → New → Record-Triggered Flow.
bject: Enrollment__c, Trigger on update.
ondition: Enrollment_Status__c Equals "Approved".

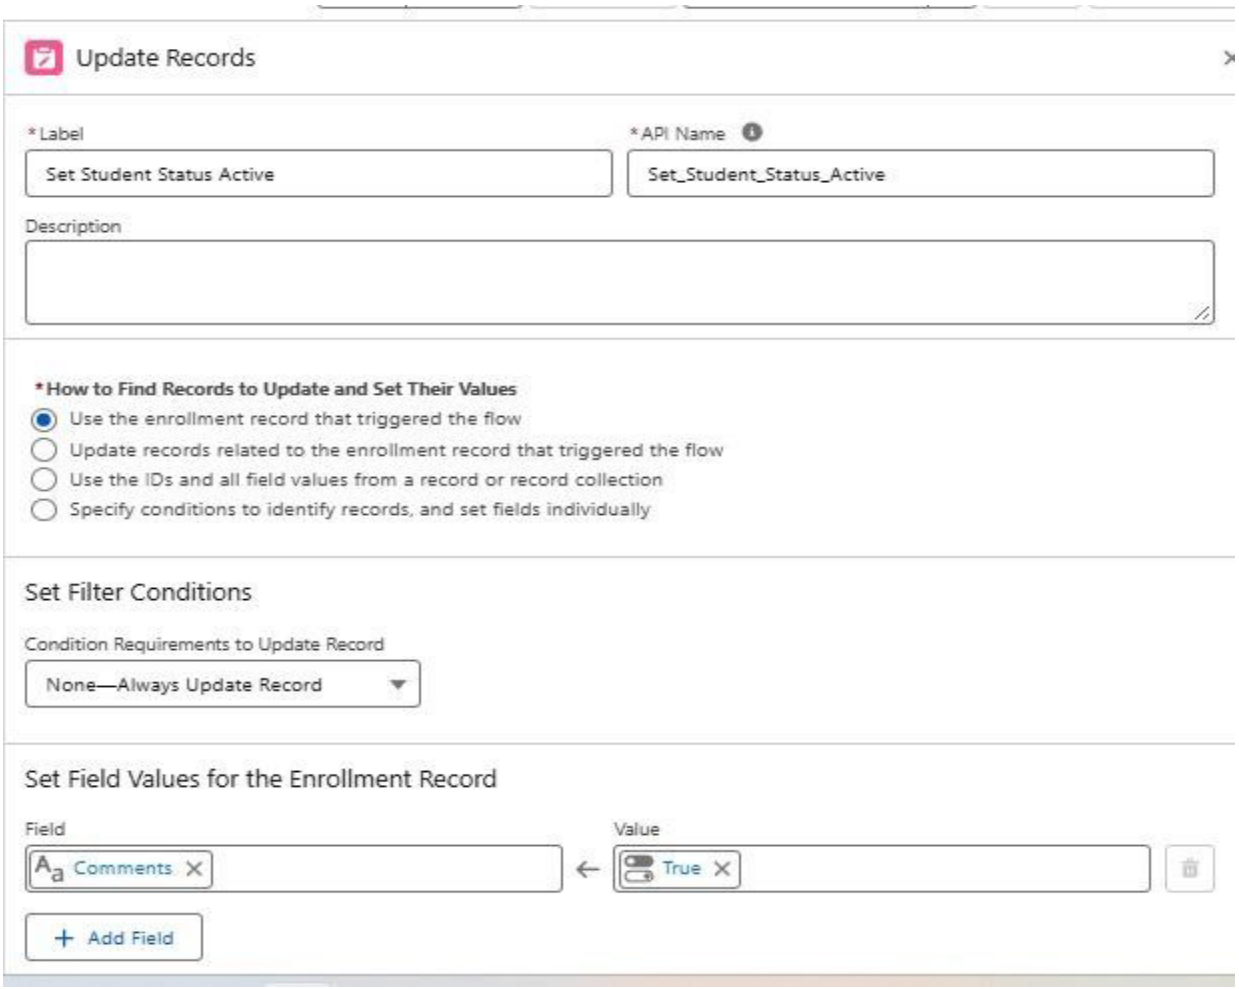

dd Get Records to fetch related Student__c.

dd Action (Email Alert) to send email to student.

dd Action to notify Admin if needed.
dd Update Records to set Student__c.Status__c = "Active".

ave as Enrollment Approved Action → Activate.

Activity 3: Auto-Assign Instructor Based on Course Category

Purpose:
Assign Instructor automatically based on Course category.

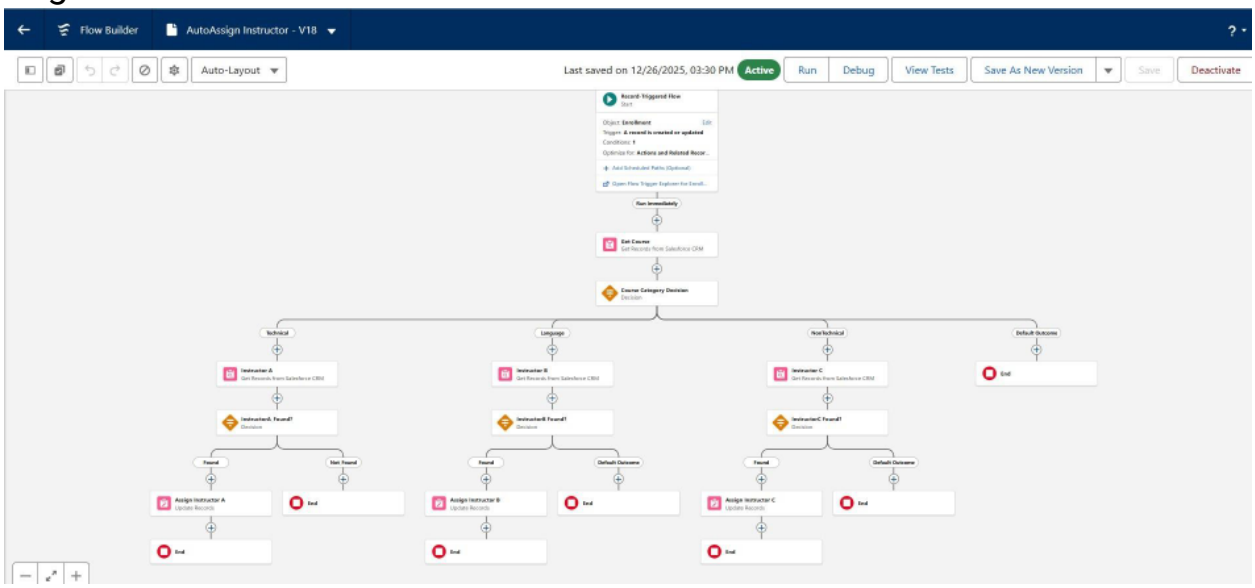

Rules:

Technical → Instructor A
Language → Instructor B

Non-Technical → Instructor C

Steps:

repare Instructor__c records with codes (e.g., INSTR_A, INSTR_B, INSTR_C).
reate Record-Triggered Flow on Enrollment__c (created/updated).
dd Get Records to fetch related Course__c.
dd Decision element on Course__r.Category__c:
echnical / Language / Non-Technical outcomes.
or each outcome:
et Instructor record (A/B/C) based on code or name.
pdate Records: set Instructor__c = Get_Instructor_X.Id.
ave as AutoAssign_Instructor → Activate.

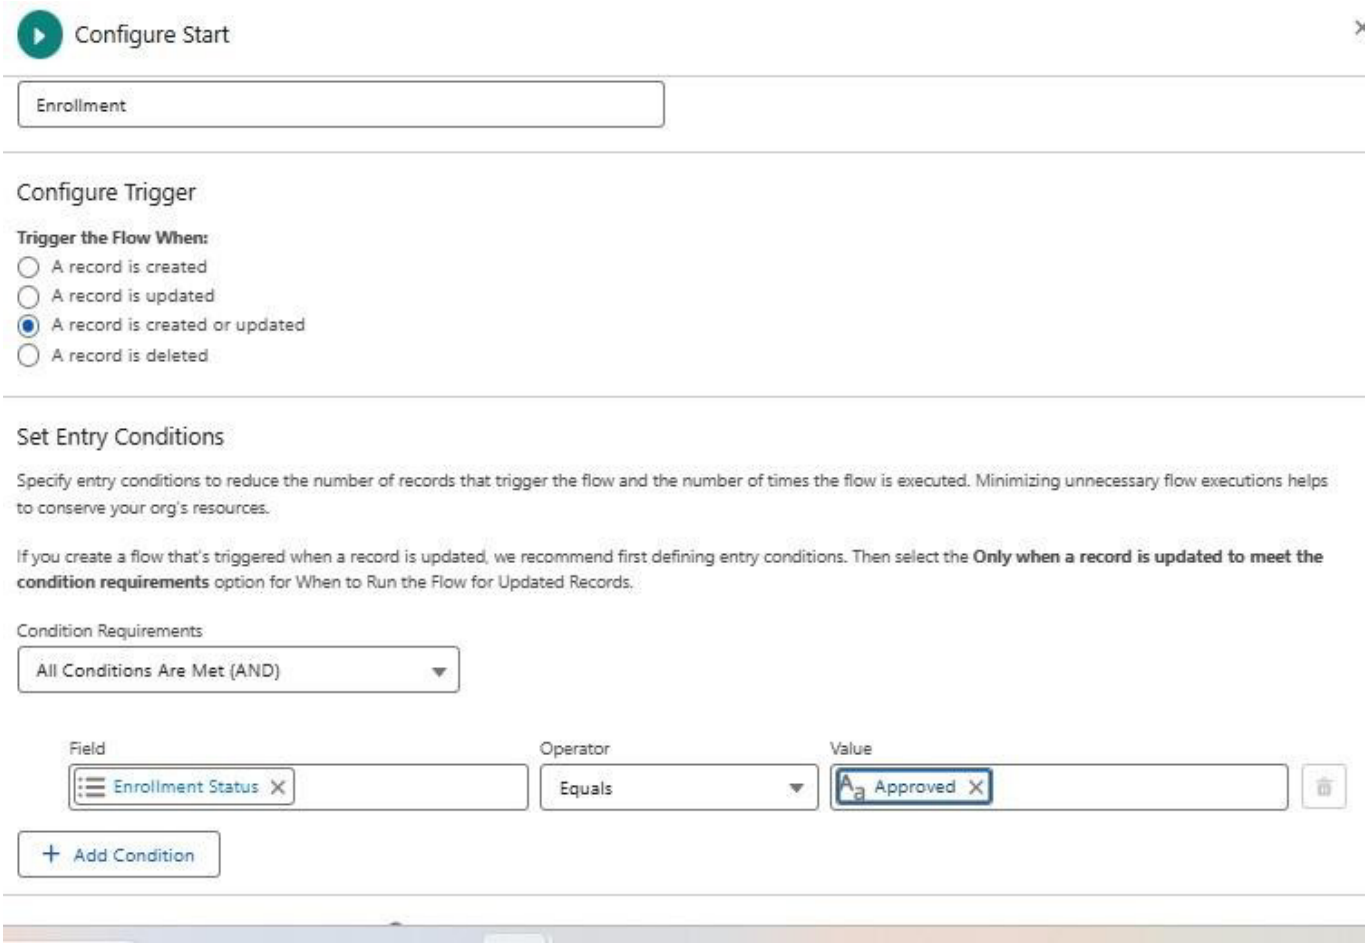

Activity 4: Auto-Create Task for Follow-Up

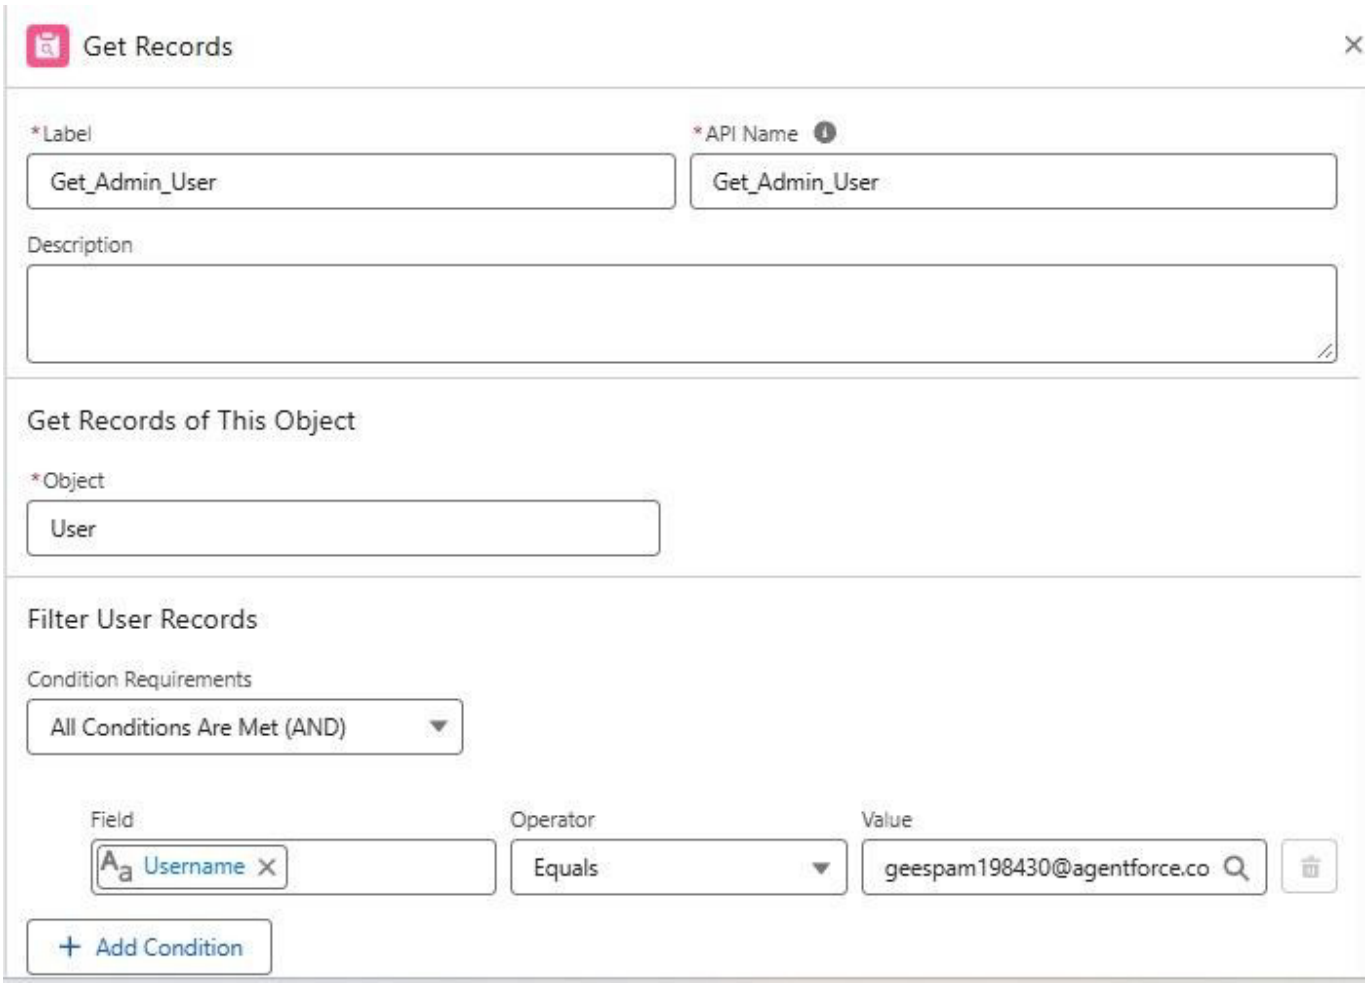

Purpose:
When Enrollment is “Requested”, create a follow-up task for Admin.

Steps:

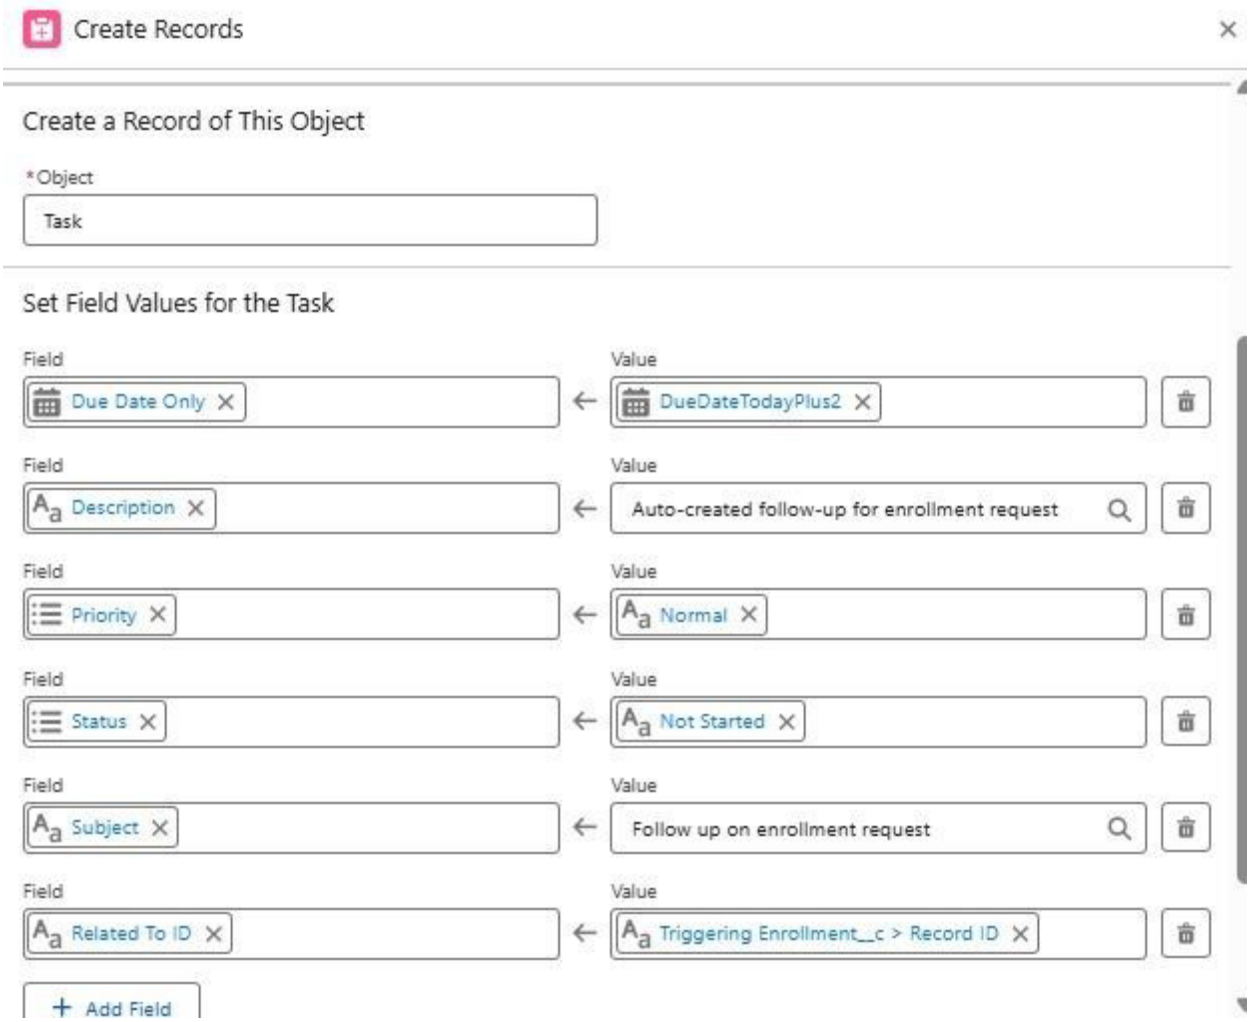

ate Record-Triggered Flow on Enrollment__c.
ger: Record created or updated; condition Enrollment_Status__c = "Requested".

Get Records to fetch Admin user (by Username / Profile).
Formula (Date): TODAY() + 2 for due date.

Create Records for Task:
ect: Follow up on enrollment request.
erId: Admin user Id.
tId: Enrollment Id.
vityDate: formula Today + 2.

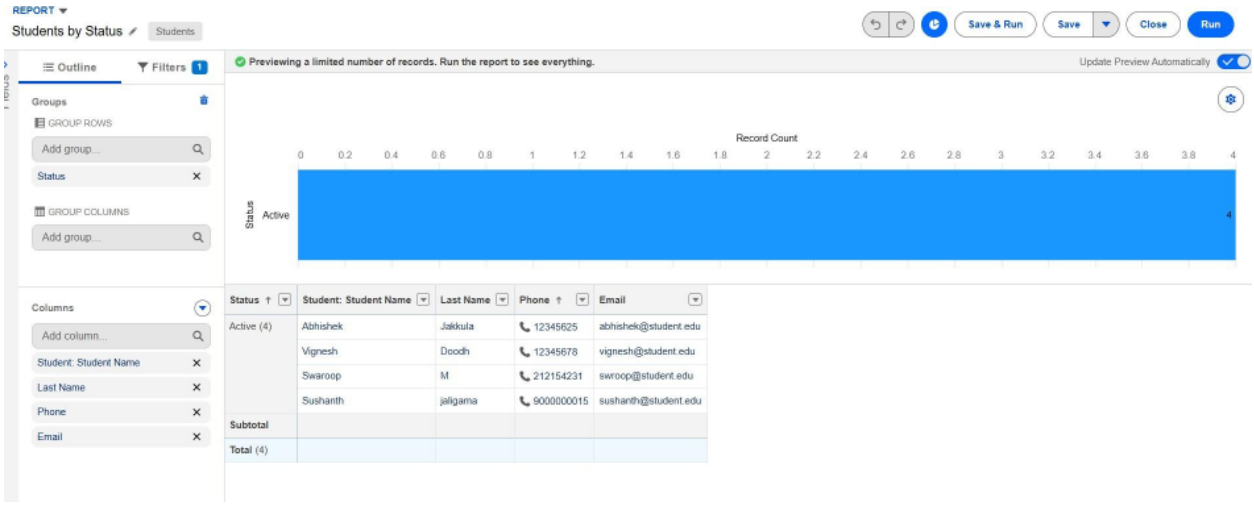

ve as Create_Followup_Task → Activate.

Milestone 11 – Reports:

Activity 1: Create “Students by Status” Report

1. Go to Reports → New Report.
2. Report Type: Students.
3. Group rows by Status__c.
4. Add columns as needed (Name, Email, Phone).

5.Save as Students by Status.

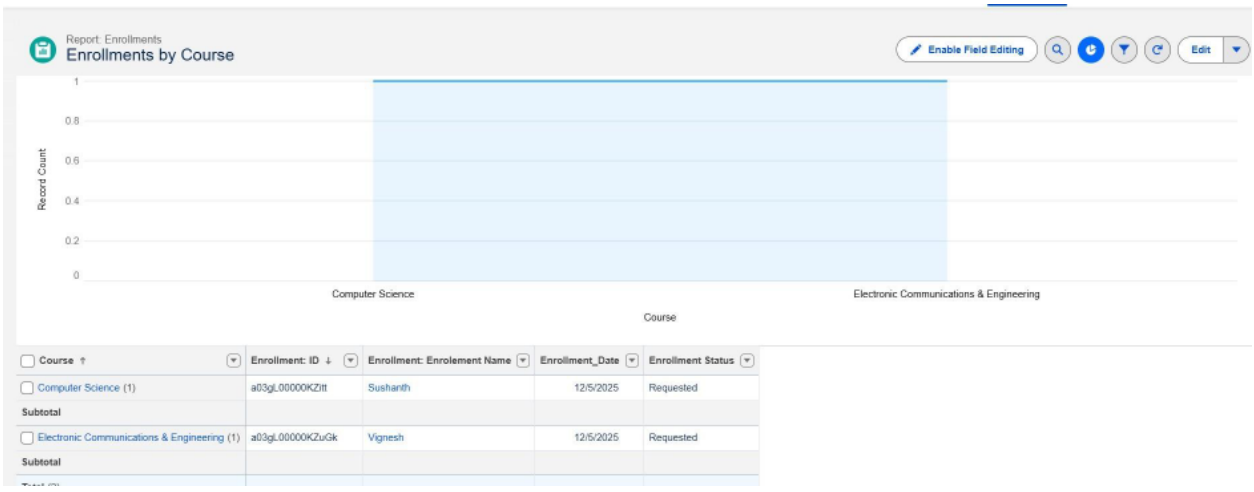

Activity 2: Create “Enrollments by Course” Report

1.New Report → Report Type: Enrollments.

2.Grouprows by Course__r.Name.

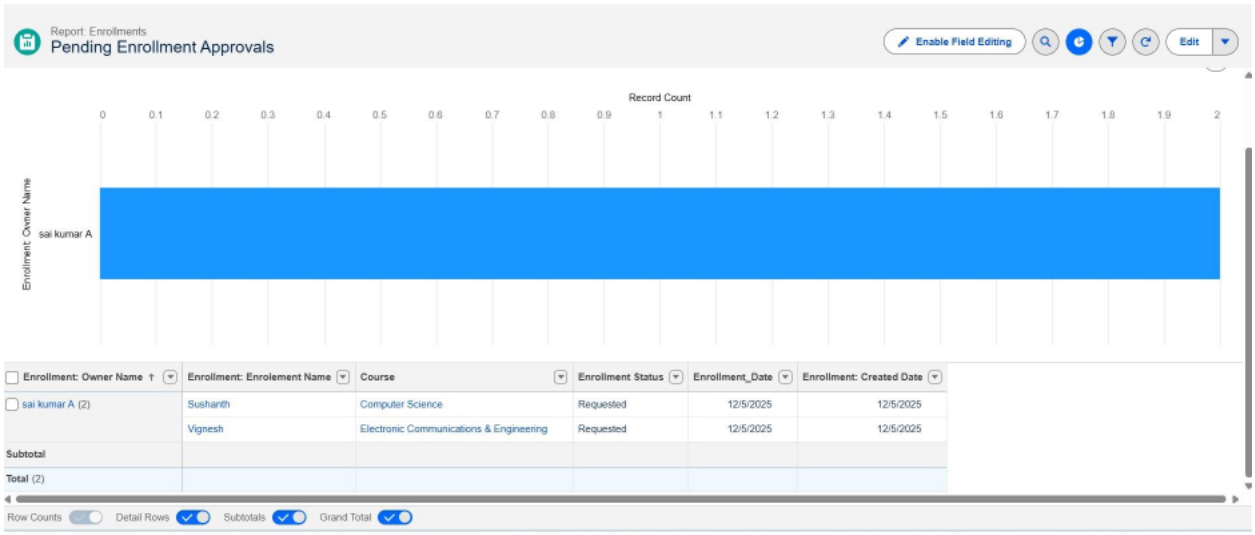

3.Show Record Count per course.

4.Save as Enrollments by Course

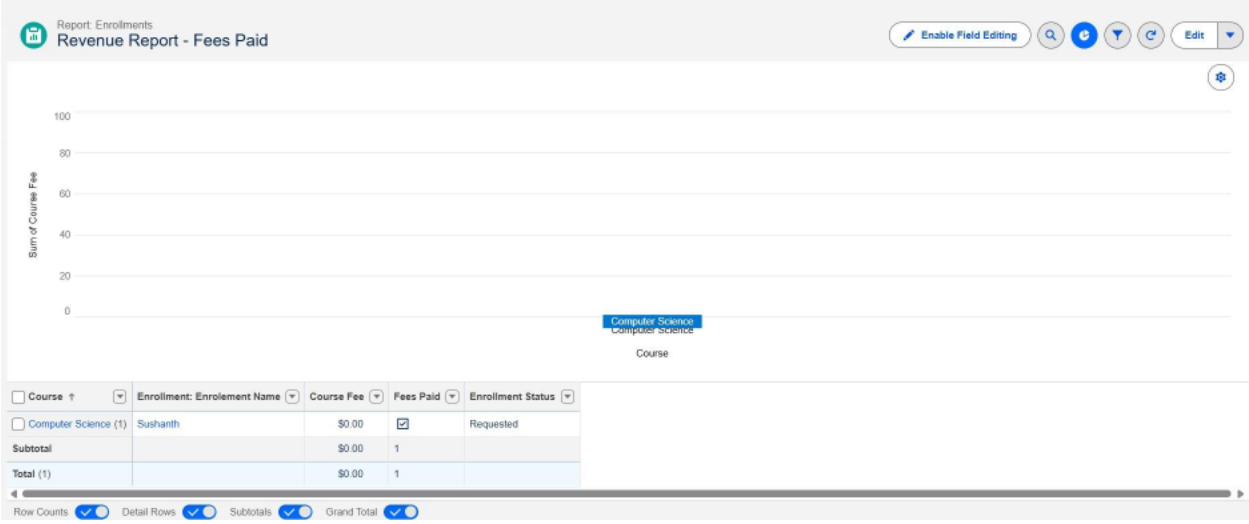

Activity 3: Create “Pending Enrollment Approvals” Report

Report → Enrollments report type.
Enrollment_Status__c = "Requested".
olumns (Student, Course, Owner, Created Date).
as Pending Enrollment Approvals.

Activity 4: Create “Revenue Report (Fees Paid)” Report

1. New Report → Enrollments report type.
2. Filter: Fees_Paid__c = TRUE.
3. Group by Course__r.Name.
4. Summarize Course_Fee__c or similar fee field.
5. Save as Revenue Report – Fees Paid.

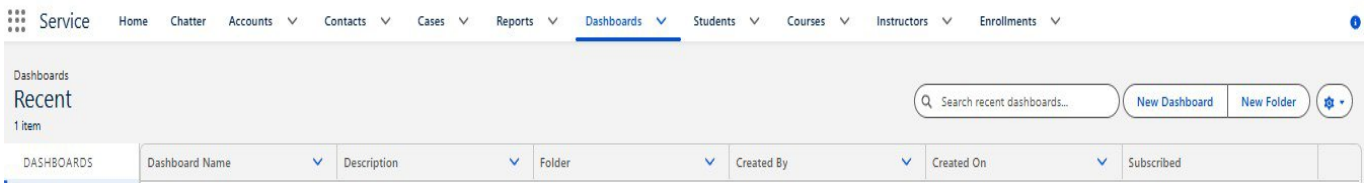

Milestone 12 – Dashboards:

Activity 1: Create “Student Managemet Dnashboard” Steps:

Go to Dashboards → New Dashboard.

Name: Student Management Dashboard.

Select folder → Create.

Select new Dashboard folder and Save.

Add components:

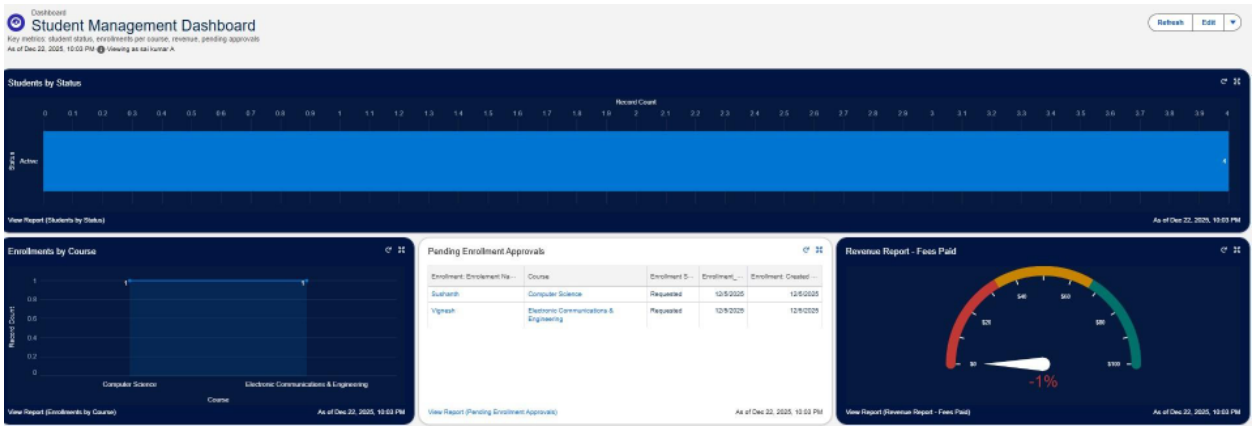

Donut Chart → using Students by Status report.

Bar Chart → using Enrollments by Course report.

Gauge → using Revenue Report – Fees Paid (sum of revenue field).

able → using Pending Enrollment Approvals report.

4. Arrange components on canvas.

Click Save → Done.

Milestone 13 – Security Setup

Activity 1: Configure Profiles

):

1. Go to Setup → Profiles → New (or CloneProfiles Required:

dmin – Full access.
nrollment Officer – Create/Update Enrollments.
structor – Read-only access to assigned Enrollments.

2. Steps (example for Enrollment Officer fName:
   Enrollment Officer. 3. In Object
   Settings:

   Enrollment__c: Read, Create, Edit.
   Student__c / Course__c: Read (and Edit if required).

4. Save.

Repeat similarly for Instructor profile with Read-Only on Enrollments

Activity 2: Create Permission Sets

o to Setup → Permission Sets → New.
reate Custom Object Access (additional access to project objects if needed).
reate Dashboard Editor (Create/Customize Reports & Dashboards permissions).
ssign to relevant users.

Activity 3: Configure Sharing & OWD Steps:

o to Setup → Sharing Settings.
et Organization-Wide Defaults:

Students (Student__c): Public Read/Write.
Courses (Course__c): Public Read/Write.
Enrollments (Enrollment__c): Private. 3. Save.

For Instructor access to assigned Enrollments, optionally:

dd a User lookup on Enrollment (Instructor User).
se a simple Record-Triggered Flow to set OwnerId = Instructor User so they can see only their own records.

7. FUNCTIONAL & PERFORMANCE TESTING

Functional testing checks whether each feature of the Salesforce application works correctly according to the requirements.

In our Student Enrollment & Course Management System, we test:

Student record creation

Course record creation

Instructor record creation

Enrollment creation

Mandatory field validation

Enrollment validation rules

New Enrollment and Re-Enrollment record types

Automated flows

Enrollment approval and rejection

Instructor assignment

Reports

Dashboards

Security and user access
Example:

If fees are not paid, the system should not allow an enrollment to be approved. We test whether this validation works correctly.

8. ADVANTAGES & DISADVANTAGES

Advantages

Centralized Data

All student, course, instructor, and enrollment information is maintained in one Salesforce system.

Example:

Instead of using separate spreadsheets, enrollment officers can access student and enrollment information from Salesforce.

Automated Workflows

Salesforce Flows and Approval Processes automate repetitive tasks.

Example:

When an enrollment is approved, the system can automatically update the student's status and perform related actions.

Real-Time Reporting

Reports and dashboards provide current information for decision-making.

Example:

Managers can view enrollment statistics, pending approvals, and revenue information through dashboards.

Disadvantages

Salesforce Dependency

The application depends on the Salesforce platform to operate.

Initial Configuration Effort

Setting up objects, fields, relationships, validation rules, flows, approvals, reports, dashboards, and security requires considerable initial configuration

9. Conclusion:

The Student Enrollment & Course Management System (SECMS) successfully provides a centralized Salesforce-based solution for managing the student academic enrollment process. It helps manage student records, courses, enrollments, instructor assignments, approvals, and reporting in an organized manner.

The system reduces manual work by using Salesforce Flows, Validation Rules, and Approval Processes. Reports and dashboards provide real-time information for monitoring enrollment activities and supporting decision-making.

Overall, SECMS improves data accuracy, operational efficiency, workflow management, and transparency. The project demonstrates how Salesforce can be used as a scalable and user-friendly platform for digitizing the student enrollment process.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

Future Scope

The system can be further enhanced with:

Payment gateway integration

Student self-service portal

Advanced analytics and data-driven insights

Mobile access

Additional automation and integrations

11. FUTURE SCOPE

Payment Gateway Integration

The system can be integrated with an online payment gateway so students can pay enrollment/course fees directly through the system.

Student Self-Service Portal

A dedicated portal can allow students to:

View their profile

View available courses

Submit enrollment requests

Check enrollment status

View payment information

3. Analytics-Driven Insights

Advanced analytics can be added to analyze enrollment data and provide useful insights for management.

Example: Analyze enrollment trends, course registrations, and student statistics. 4. Mobile Access

The system can be extended to support mobile access, allowing users to access enrollment information and system features through mobile devices.

11. APPENDIX

The Appendix contains additional information and supporting materials related to the Student Enrollment & Course Management System (SECMS). It provides supporting details that help explain the implementation and working of the project.

A. Salesforce Objects

The main custom objects used in the project are:

Student – Stores student information.

Course – Stores course details.

Enrollment – Stores enrollment records.

Instructor – Stores instructor information.

B. Salesforce Features Used

The project uses the following Salesforce features:

Salesforce Lightning

Custom Objects

Custom Fields

Relationships

Page Layouts

Validation Rules

Salesforce Flows

Approval Process

Reports

Dashboards

Security and Access Control

Project Workflow

The overall workflow of the system is:

Student Registration → Course Selection → Enrollment Request → Fee Payment → Approval → Instructor Assignment → Reporting & Completion.

Student Enrollment & Course Management System (SECMS)(NM) (1).pdf

Supporting Screenshots

The appendix can include screenshots of:

alesforce Developer Account

ustom Objects

ustom Fields
bject Relationships

Page Layouts

Validation Rules

Salesforce Flows

Approval Process

Reports

Dashboards

Lightning App

Security Settings

Testing Evidence

Screenshots and test results can be included to demonstrate that the major SECMS functions work as expected, including student management, course management, enrollment processing, approval, instructor assignment, reporting, and security.

Future Enhancements

Possible future enhancements include payment gateway integration, a student self-service portal, advanced analytics, and mobile access.

Thank You
